U. S. DEPARTMENT OF THE INTERIOR
U. S. GEOLOGICAL SURVEY

by

Manuel Nathenson

OPEN-FILE REPORT 97-692

This report is preliminary and has not been reviewed for conformity with U.S. Geological Survey editorial standards or with the North American Stratigraphic Code. Any use of trade, product or firm names is for descriptive purposes only and does not imply endorsement by the U.S. Government.

1U.S. Geological Survey, 345 Middlefield Road MS 910, Menlo Park, California 94025

1997
The Volcano Hazards Program of the U.S. Geological Survey is part of the Geologic Hazards Assessments subactivity as funded by Congressional appropriation. In Fiscal Year 1995, the separate Geothermal Research Program was folded into an expanded Volcano and Geothermal Investigations Program that was subsequently renamed the Volcano Hazards Program. This report includes citations for the previously separate Geothermal Research Program.

Investigations are carried out in the Geologic and Water Resources Divisions of the U.S. Geological Survey and with cooperators at the Alaska Division of Geological and Geophysical Surveys, University of Alaska Fairbanks Geophysical Institute, University of Utah, and University of Washington Geophysics Program. This report lists publications from all these institutions.

This report contains only published papers and maps; numerous abstracts produced for presentations at scientific meetings have not been included. Publications are included based on date of publication with no attempt to assign them to Fiscal Year.
Volcano Hazards Bibliography 1994 - 1996

Cashman, K. V., and Mangan, M. T., 1994, Physical aspects of magmatic degassing; II, Constraints on vesiculation processes from textural studies of eruptive products, in Carroll,
