Map Showing Geology, Oil and Gas Fields, and Geologic Provinces of the Caribbean Region

Introduction

The maps were created to geospatially present and describe the geology, oil and gas fields, and geologic provinces of the Caribbean region. The maps were created using the U.S. Geological Survey's Geospatial Data Gateway and Open-File Report 97-470-K. The maps were created to aid in the exploration and development of the geologic resources of the Caribbean region. The maps are available for download from the U.S. Geological Survey's Geospatial Data Gateway.

Map Data

The maps are based on a variety of data sources, including satellite imagery, aerial photography, and geophysical surveys. The maps were created using the U.S. Geological Survey's Geospatial Data Gateway and Open-File Report 97-470-K.

Map Symbols

The maps use a variety of symbols to represent different features, including oil and gas fields, geologic provinces, and geophysical survey lines. The symbols are designed to be easily identifiable and to provide useful information about the geology of the Caribbean region.

Map Accuracy

The maps are designed to be as accurate as possible, but it is important to note that they are based on data that may be subject to error. The maps are intended to be used as a general guide to the geology of the Caribbean region, and they should not be used for precise location or measurement.

Map Use

The maps are intended for use in education, research, and exploration, and they can be used by anyone with an interest in the geology of the Caribbean region. The maps are available for download from the U.S. Geological Survey's Geospatial Data Gateway and Open-File Report 97-470-K.

Map Credits

The maps were created using the U.S. Geological Survey's Geospatial Data Gateway and Open-File Report 97-470-K. The maps were created to aid in the exploration and development of the geologic resources of the Caribbean region. The maps are available for download from the U.S. Geological Survey's Geospatial Data Gateway.
