

# Preliminary Table of Placer Gold Deposits and Occurrences of Mongolia

**By Gunchin Dejidmaa**  
**(Institute of Geology and Mineral Resources, Mongolian Academy of Sciences,**  
**Ulaanbaatar, Mongolia)**

## INTRODUCTION

This report is a preliminary tabular compilation of the placer gold deposits and occurrences of the Mongolia. The deposit and occurrence data were compiled from the following sources.

Guide to the geology and mineral resources of Mongolia, 1996, D. Jargalsaihan, M. Kazmer, Z. Bara, and D. Sanjaadorj, eds.: Geological Exploration Consulting Services (GCS) Co., 330 p., 2 sheets, scale 1:3, 200,00.  
State Geological Fund, 1995, D. Largalsayhan, ed., Gold resources map of Mongolia, Series 5, 1 sheet, scale 1:3,200,000.

In future publications of the project, the descriptions of mineral deposits will be expanded.

## DEFINITIONS

The following key definitions are provided.

*Mine*. A site where valuable minerals have been extracted.

*Deposit*. A general term for any lode or placer mineral occurrence, mineral deposit, prospect, and (or) mine.

*Occurrence*. A site of potentially valuable minerals on which no visible exploration has occurred, or for which no grade and tonnage estimates have been made.

*Prospect*. A site of potentially valuable minerals in which excavation has occurred.

## CLASSIFICATION OF MINERAL DEPOSITS

Placer deposits and occurrences in this report are classified into various models or types described below. This classification of mineral deposits was derived mainly from the mineral deposit types of Eckstrand (1984), Cox and Singer (1986), Nokleberg and others (1987, 1993, 1994a, b, 1997), cited references for specific models, and unpublished data of the Russian authors. The mineral deposit types used in this report consist of alluvial terrace, proluvial, alluvial-proluvial, and buried alluvial. For additional

information on the methodology of mineral deposit types, the reader is referred to the discussions by Eckstrand (1984) and Cox and Singer (1986).

## DESCRIPTIONS OF HEADINGS FOR TABLE

### Map Number, Name, Major Metals

Map number refers to a specific deposit in a given region. Deposits and occurrences are numbered separately within individual quadrants bounded by integer values of 4° of latitude and 6° of longitude. The quadrants are numbered from west to east, and are lettered from south to north. A latitude and longitude location is stated for each deposit in degrees and minutes. Names of deposits and occurrences are derived from published sources or common usage.

### Deposit Type

The type of deposit, or deposit model is an interpretation that was made by examining the unpublished data on each deposit, and then classifying the deposit using the deposit models described elsewhere in this publication.

### Abbreviations in Tables

Standard chemical symbols: for example, Au.
