

Figure 13. Sidescan-sonar image of the Mud Dumpsite area located at the head of the Hudson Shelf Valley. This area is marked by a series of high-backscatter “dots”, interpreted to be individual dumps of dredged and other material disposed in this area since the late 1800’s (arrows point to example of “dots”). High backscatter is represented by light tones, low backscatter by dark tones. Bathymetric contours are in meters. See Figure 3 for location.
