

August 18, 1992

Figure 11. Map showing areal and mass distributions of August 18 tephra-fall deposit. Field numbers (Table 3) have been reassigned, for presentation on the map, as numbered points that increase with distance from the volcano. The points mark stations where mass-per-unit-area (MPUA) samples and other observations were collected; the data are presented in Table 3. Note the secondary MPUA maximum beginning 132 km from the vent and extending to 305 km downwind.

EXPLANATION			
	Sample site and number		Primary road or highway
	Isomass line (g/m ²) Dashed where inferred		Secondary road
			Stream or river
			Water body
			Glacier
			Trace
