Table 2. Cont.

year	U.S. Mine Production	Secondary Production ¹	World Production	Industrial Consumption	U.S. Import	U.S. Export ²
1996	242	7780	156000	13600	37600	462
1997	356	7550	149000	13500	39300	652
1998	242	7710	140000		34600	4170
1999	480	5000	138000		34000	3600

1. Review of secondary Pb smelting in 1993 showed recovery of secondary Sb was markedly overestimated in earlier reports.

2. Includes metal alloy, waste and scrap. Scheme changed in 1998 to include other products.

3. Defined as secondary production+ imports-exports+adjustments for government stocks (not reported here; on average represents 1 to 2 percent except in recent years as government releases more of its stockpile). Note the difference between this value and that for industrial consumption. Values prior to 1993 are possibly high (see footnote 1).

4. New York dealer price for greater than 99 percent metal, c.i.f., U.S. ports.
