

Core B3C2 was taken on June 19, 1996 in 13 meters of water. The core measured 36 cm in length, was x-rayed on June 25, 1996 and was subsampled on October 24, 1996 at 0.5 cm intervals down the whole core. Features noted are seen in the x-ray, water content, and texture profiles above and include sand and mud deposits, mottled sediment, and biological features such as significant shell layers.
