Core D5C3 was taken on June 20, 1996 in 23 meters of water. The core measured 37.2-37.6 cm in length, was x-rayed on July 1, 1996 and was subsampled on April 30, 1997 at 0.5 cm intervals down the whole core. Features noted are seen in the x-ray, water content, and texture profiles above and include mottled sediment, wispy deposits, and biological features such as worm tubes and shells.
