

X-radiograph

Water Content (weight fraction)

Core E6C4 was taken on June 20, 1996 in 23 meters of water. The core measured 43.5 cm in length, was x-rayed on July 1, 1996 and was subsampled on January 30, 1997 at 0.5 cm intervals down the whole core. Features noted are seen in the x-ray and water content profiles above and include mottled sediment, gas, and some biological features such as small shells and worm tubes. No textural analysis is intended for this core.
