

Core G3C2 was taken on June 21, 1996 in 46 meters of water. The core measured 49.5 cm in length, was x-rayed on June 26, 1996 and was subsampled on October 31, 1996 at 0.5 cm intervals down the whole core. Features noted are seen in the x-ray, water content, and texture profiles above and include sand and mud ribbons, mottled sediment, and biological features such as shell layers.
