

X-radiograph

Water Content (weight fraction)

Core K3C3 was taken on June 21, 1996 in 10 meters of water. The core measured 45 cm in length, was x-rayed on July 1, 1996 and was subsampled on November 21, 1996 at 0.5 cm intervals down the whole core. Features noted are seen in the x-ray and water content profiles above and include mottled sediment, angled layering, and some biological features such as small shells and worm tubes. No textural analysis is intended for this core.
