

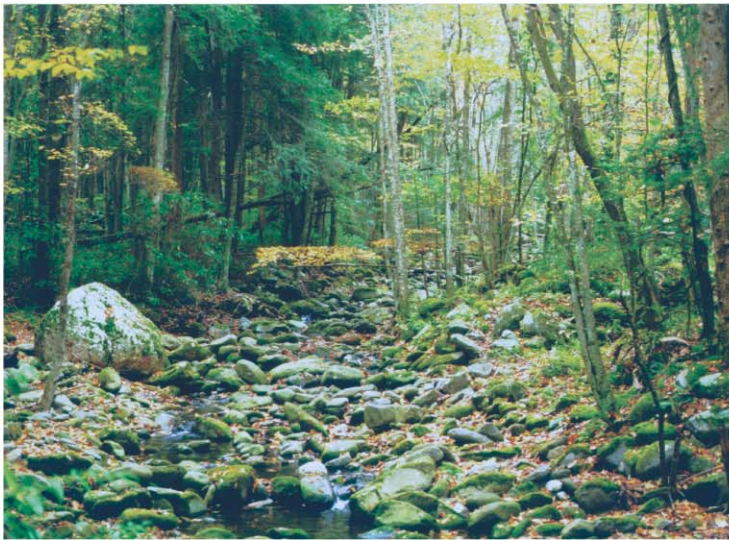

Fig. 15- Coarse alluvium consists of boulders of metasandstone that remain as a lag deposit as water removes fine material and reworks older boulder debris deposits. Examples are shown below.

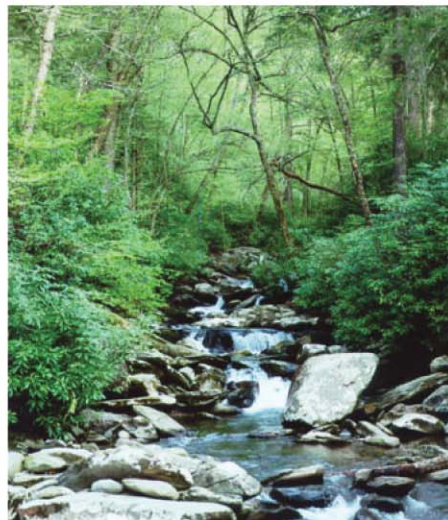

A) Rowans Creek (elevation 2400 ft, Cades Cove quadrangle).

B) Fish Camp Prong (elevation 3140 ft, Silers Bald quadrangle).

C) West Prong of the Little Pigeon River (elev = 3040 ft, Mt. Le Conte quadrangle).

D) Road Prong (elev = 3480 ft, Mt. Le Conte quadrangle).
