

**Fig. 50- Photographs of natural exposures of diamicton boulder debris.**

**Fig. 50- A) Near horizontal beds of graded silt and sand, about 1m thick, with few metasandstone cobbles along the Little River Trail (elev = 2600 ft, Gatlinburg quadrangle).**

**Fig. 50- B) Excavation along Rt.19 east of Soco Gap exposes diamicton about 10 m thick. Large boulder right of center is 2 m diameter. Upper center is a cross section of a channel with concentrated boulders of metasandstone (elev = 3640 ft, Bunches Bald quadrangle).**

**Fig. 50- C) Diamicton along Big Creek shows oriented meter-long clasts of metasandstone (elev = 2040 ft, Luftee Knob quadrangle).**
