

Figure 20. Days on which bacterial events occur (vertical bars: blue=type 1, magenta=type 2, red= types 1 and 2, gold=type 3) are shown together with cruise days (black bars); and occurrence of cold water nearshore (red= 12 deg C inshore of 30m, blue =HB01 temperature < maximum plume temperature, green=both). Black dots in row 3 indicate whether bacterial samples were taken that day. The day's higher high water as measured at Los Angeles is shown at the bottom.
