

**Figure 5.** The ratio of Enterococci concentrations to the AB411 single sample standard at stations 15S to 21N for the 2<sup>nd</sup> intensive sampling period are plotted together with sampling times at station 0 (pink dots), Los Angeles sea level (red line), and temperature 0.5m above bottom at HB01 (blue line). Only samples exceeding 104 mpn/100ml are shown here. A local time reference is used.
