

Figure 3-29. The ratio of enterococci concentrations to the AB411 single-sample standard at stations 15S to 21N for the second intensive sampling period is plotted together with sampling times at station 0 (pink dots), Los Angeles sea level (red line), and temperature 0.5 m above bottom at HB01 (blue line). Only samples exceeding 104 MPN/100 mL are shown here. A local time reference is used.
