## **How to read the Data Dictionary listings:**

**Each table starts on a new page. The top of the page shows information about the table itself:**

**Table Name**  
**Number of fields**  
**Current number of records at the time the dictionary was generated**  
**Date of last update to the table at the time the dictionary was generated**  
**Description of the table contents or function**

**Below the table section, each field in the table is listed along with definition information:**

**Field position (order number) within the table**  
**Field Name**  
**PK (checked if field is part of the Primary Key for the table)**  
**FK (checked if field is a Foreign Key--pointing to data in a 'parent' table)**  
**Rqd (checked if field is Required to have a value for each record in the table, if unchecked field is optional)**  
**Data Type of the field**  
**Size of the field (allowed number of characters for Text fields, for other data types it represents the number of bytes used for storage)**  
**Default value for the field (usually refers to a foreign key value representing a selection from a domain table)**  
**Description of the field**
