

Figure 1. Location of AVIRIS low-altitude flight lines in Plumas County (A) and El Dorado County (B), California. Blue lines are approximate center of flight lines and magenta lines are approximate boundaries of images. Each box contains the name of the 1:24,000-scale USGS 7.5 minute topographic quadrangle map for that location. Each quadrangle is approximately 7 miles (11 km) in width. Line 16 is a calibration line for the ground calibration site at Folsom Lake.
