

Figure 9.2. Sensitivity of the "surface ingestion and subsurface defecation" model to the ingestion rate constant, yr^{-1} . Model equations and parameters are presented in Crusius and others, 2004. ^{210}Pb is excess ^{210}Pb . The unlabelled ingestion rate constant (hatched squares) is 0.5 yr^{-1} . Note a surface maximum of ^{234}Th in all model runs.
