

## Helpful Tips for Using Links and Bookmarks in PDF Files

After clicking on a link **within** a section or chapter of the Water-Quality (QWDATA) documentation, do not use the browser (i.e. Netscape, Internet Explorer) "Back" button to return to the previous section. Instead, use the "Previous View" button within the Adobe viewer.

After clicking on a link to **another** section or chapter of the QWDATA documentation, it is appropriate to use the browser "Back" button to navigate to the previous section.

Bookmarks have been set up within each section for more efficient navigation. The bookmarks are located at the far left side of the document. If your bookmarks are not displayed, click on the bookmarks tab. The bookmarks have links to each section of the file as well as links to the previous document, next document, and the table of contents.
