

Figure 1. Map of San Bernardino and Santa Ana 30' x 60' quadrangles showing place names used in DESCRIPTION OF MAP UNITS and geologic report. Colored areas define structural assemblages. Approximate locations of most faults having large displacements or lengths are shown. Inferred boundary between Peninsular Ranges and San Gabriel Mountains assemblages is hidden beneath thick Quaternary deposits, and its location and character are highly speculative. ● Town or geographic feature; ▲ Mountain Peak.

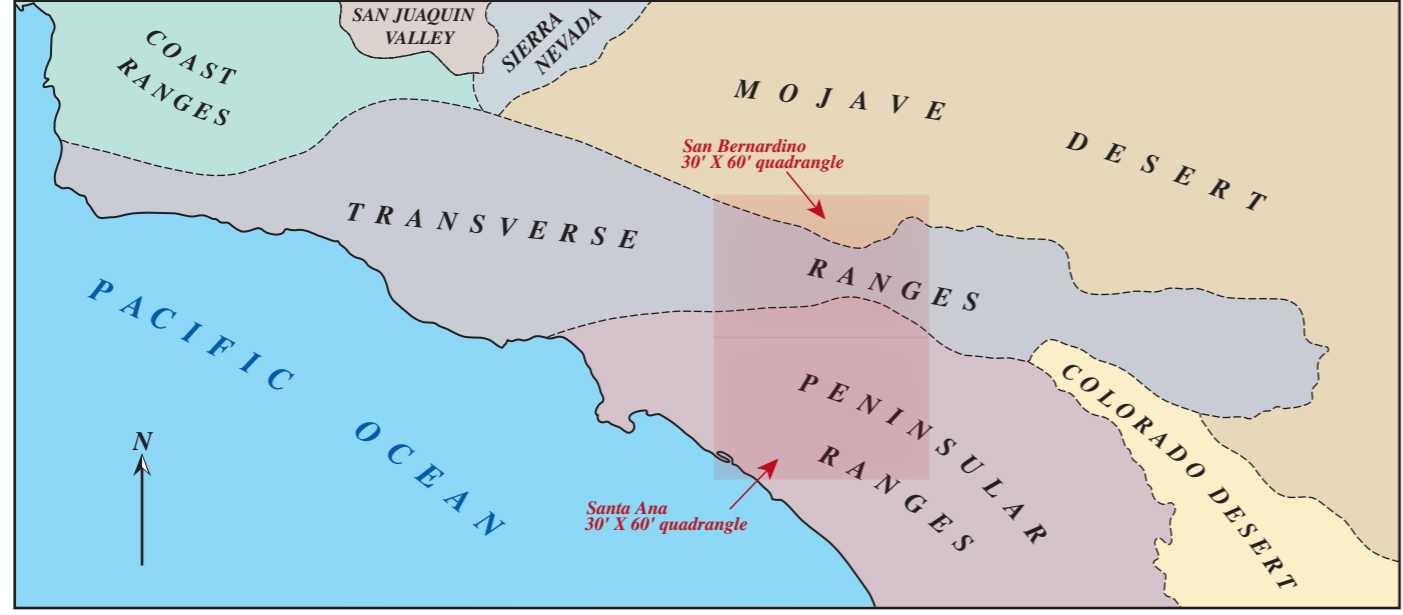

Figure 2. Map showing San Bernardino and Santa Ana 30' x 60' quadrangles in relation to physiographic provinces in southern California. Within the quadrangles, provinces and province boundaries do not conform to the rock assemblages designated in the geologic report, DESCRIPTION OF MAP UNITS, and CORRELATION OF MAP UNITS.
