Disconformity

[Boxes without color show ages of correlative stratigraphic formations on adjacent islands]

āna'i basalt	Qll	Qlv	Qlcr	Qlbr	Qli	ānapou Young volcanic volcanics rocks

See explanatory pamphlet for complete descriptions

Lāna‘i Basalt (Pleistocene)—Divided into:

- **Contact**—Approximately located
- **Fault**—Dashed where inferred; dotted where concealed. Ball and bar on downthrown side
- **Dike**—Showing trend of intrusions in unit Qli. Depiction partly schematic owing to exposure mostly in cliffs
- ▽ **Unconformity**—Described by Stearns (1940b). Four site, all near faults; tip of triangle points to site
- × **Fossiliferous marine conglomerate**—Showing two single-outcrop occurrences at high altitude on slope above Mânele Bay, as mapped by Stearns (1940b)
