

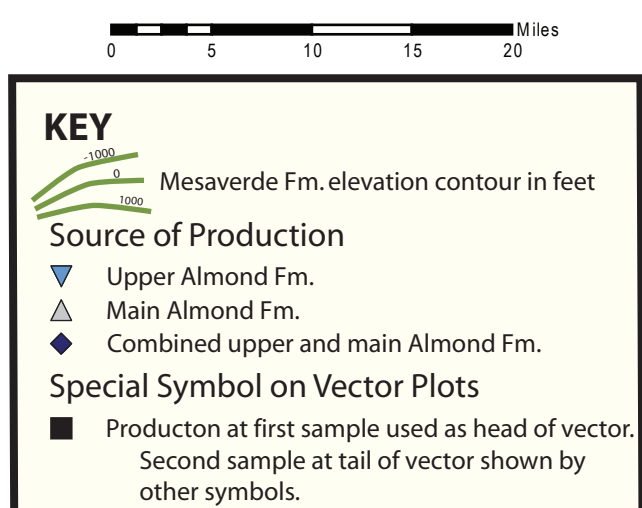

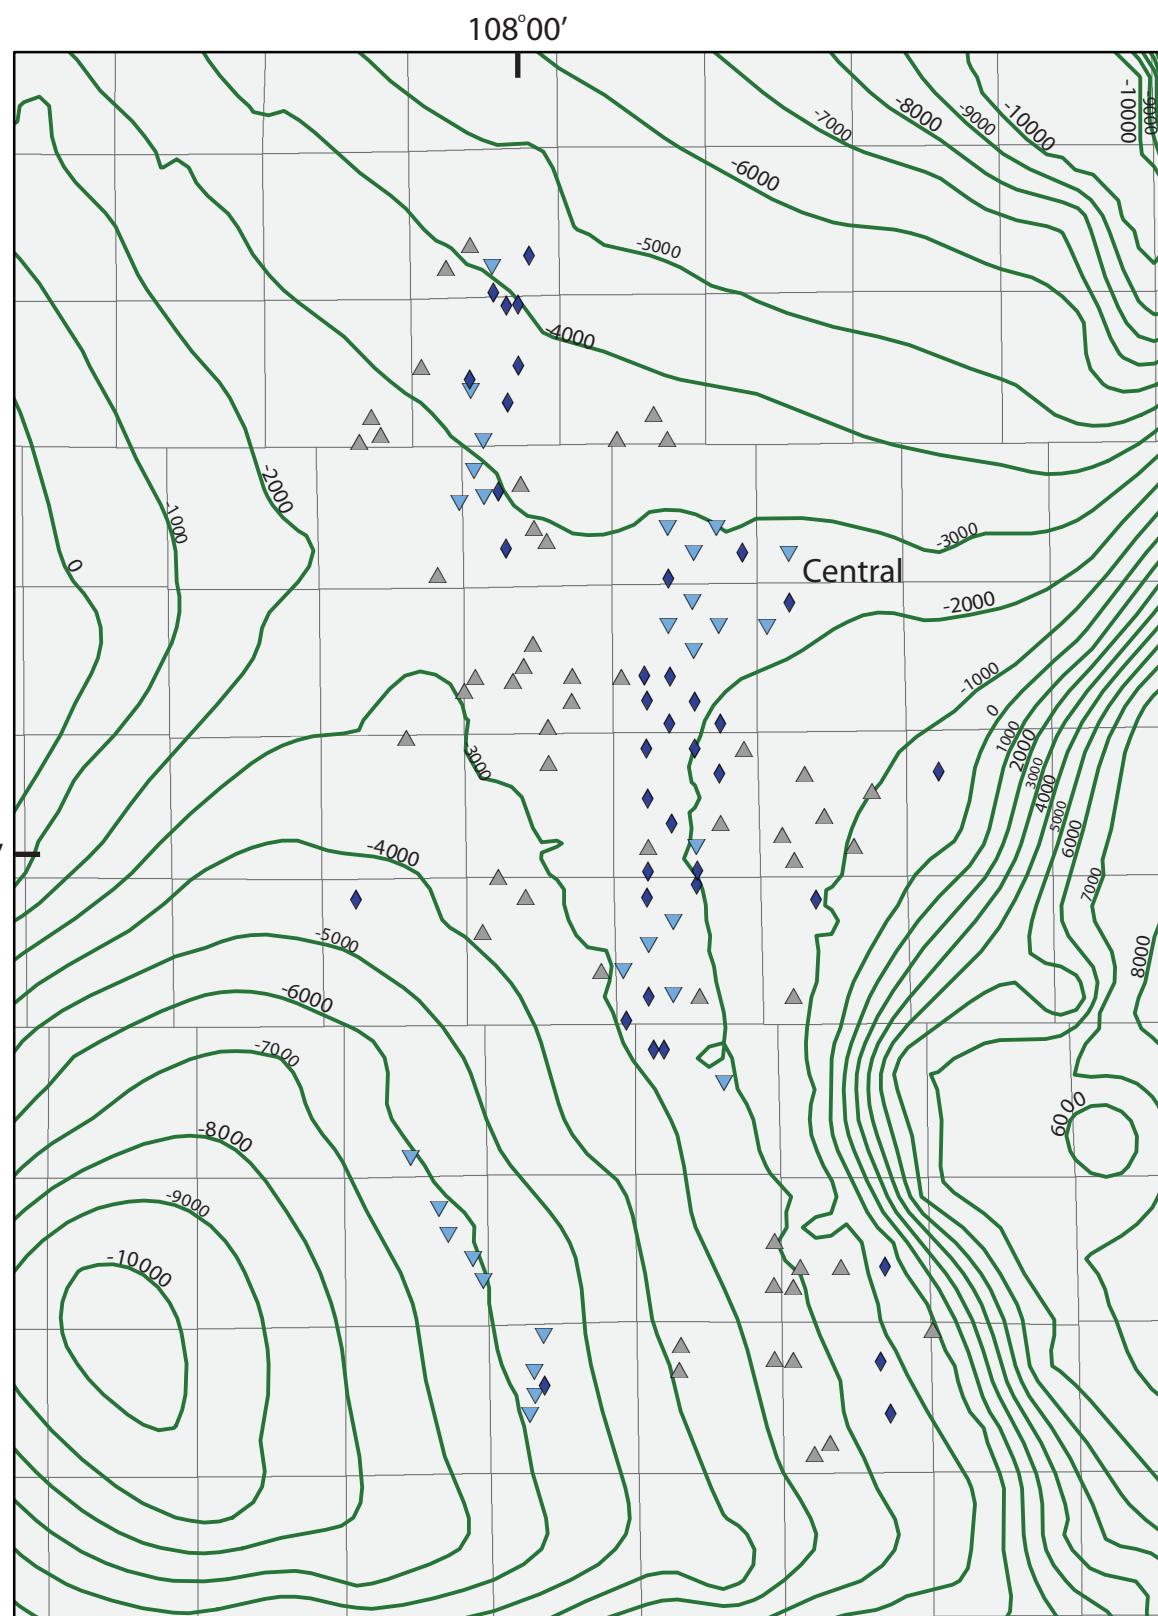

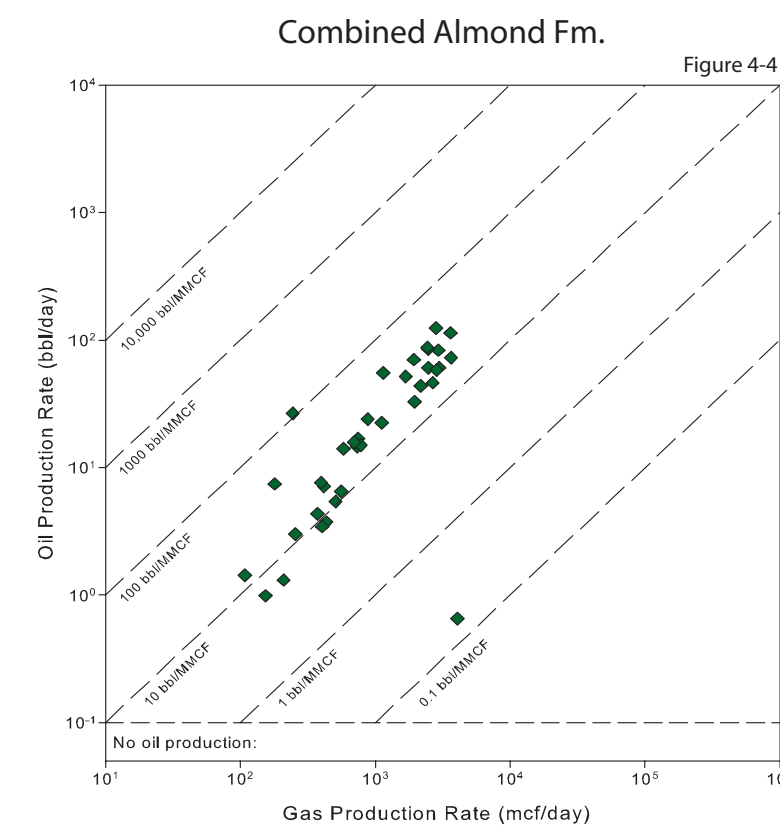

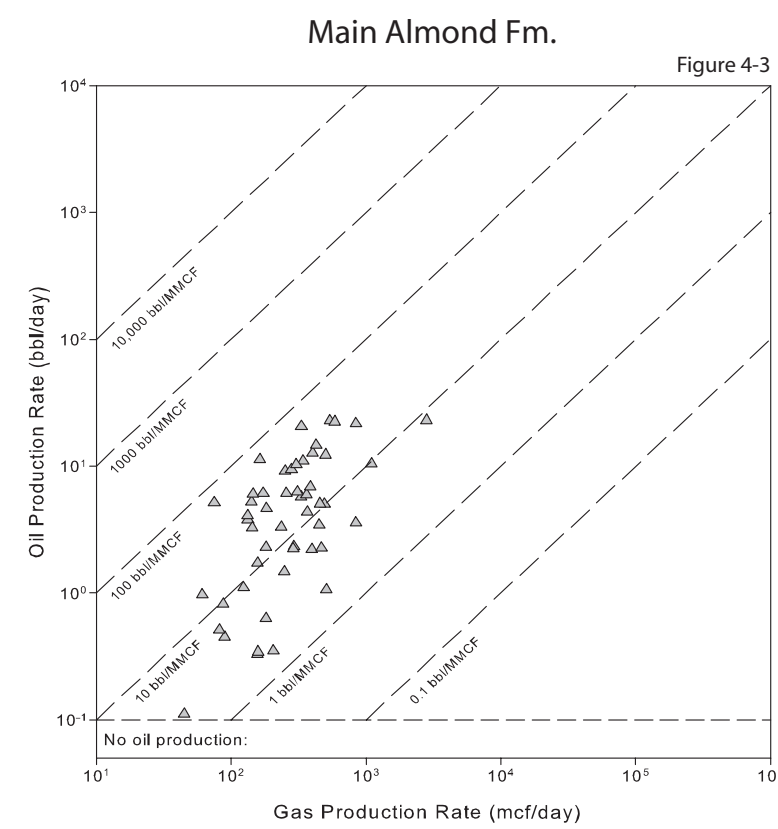

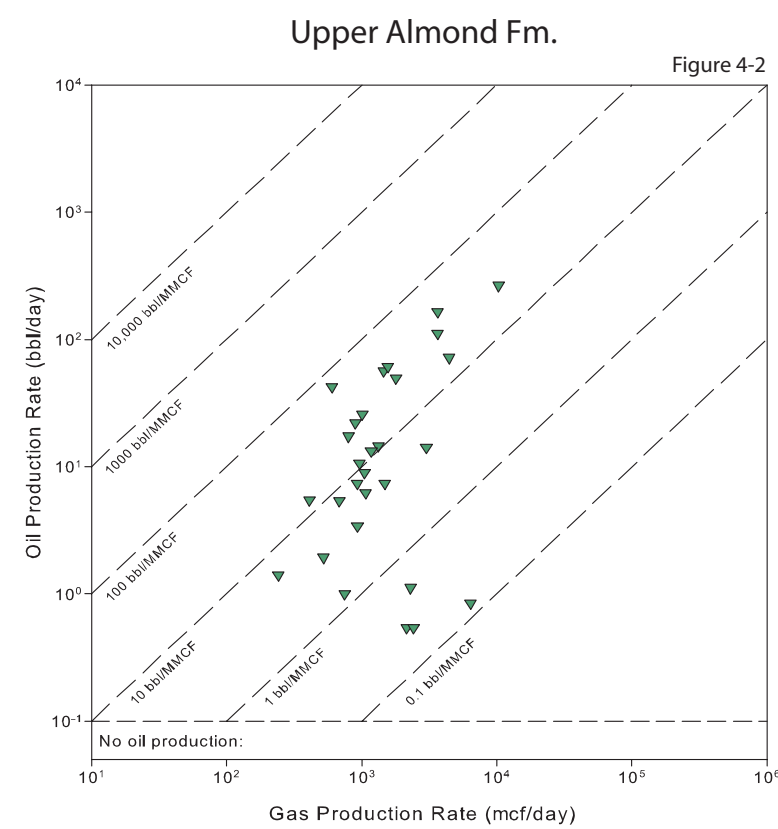

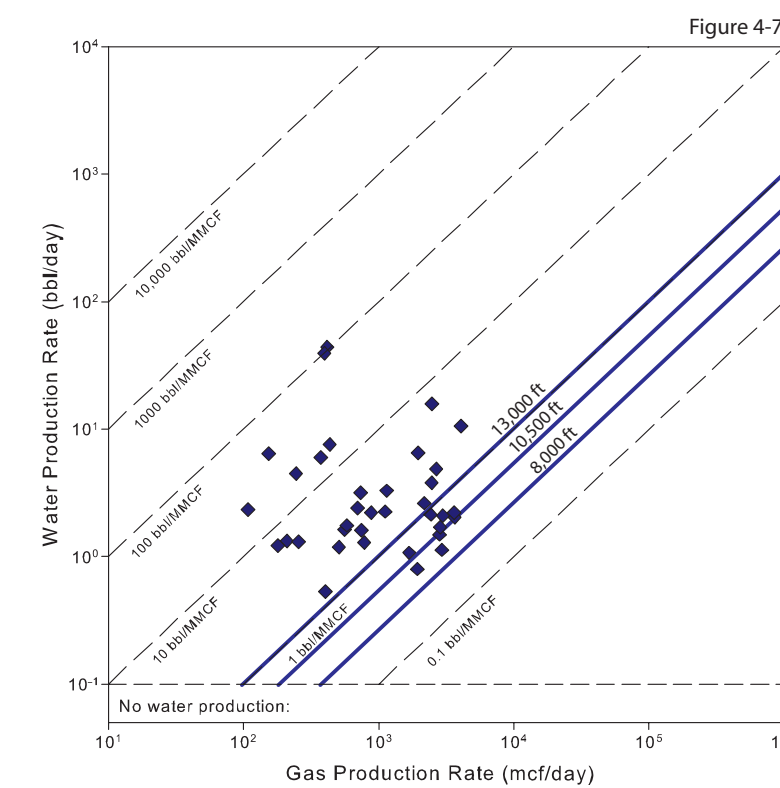

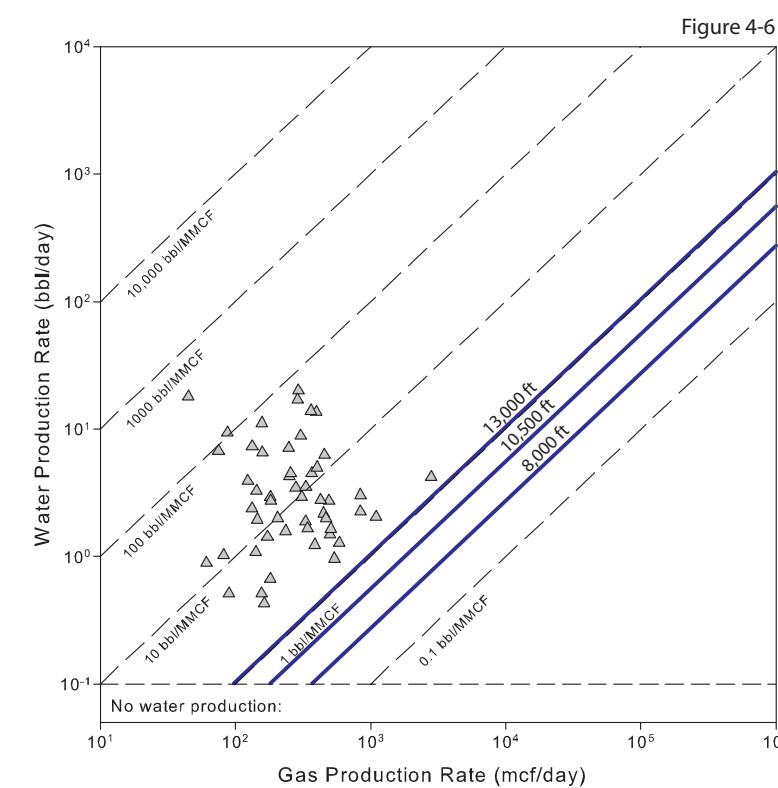

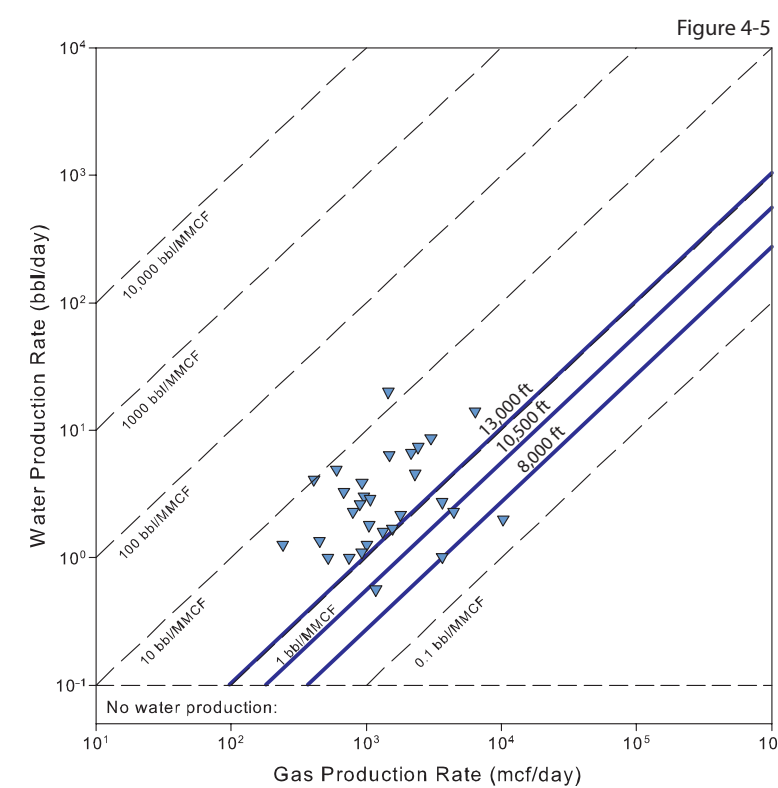

Figure 4-1. Map of selected wells in this study in the Greater Wamsutter area.

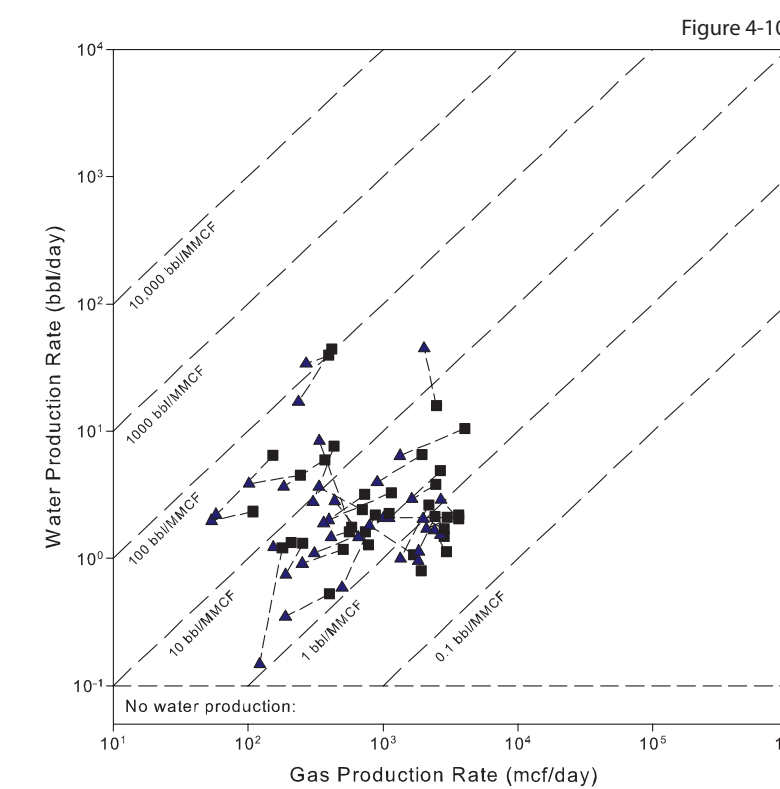

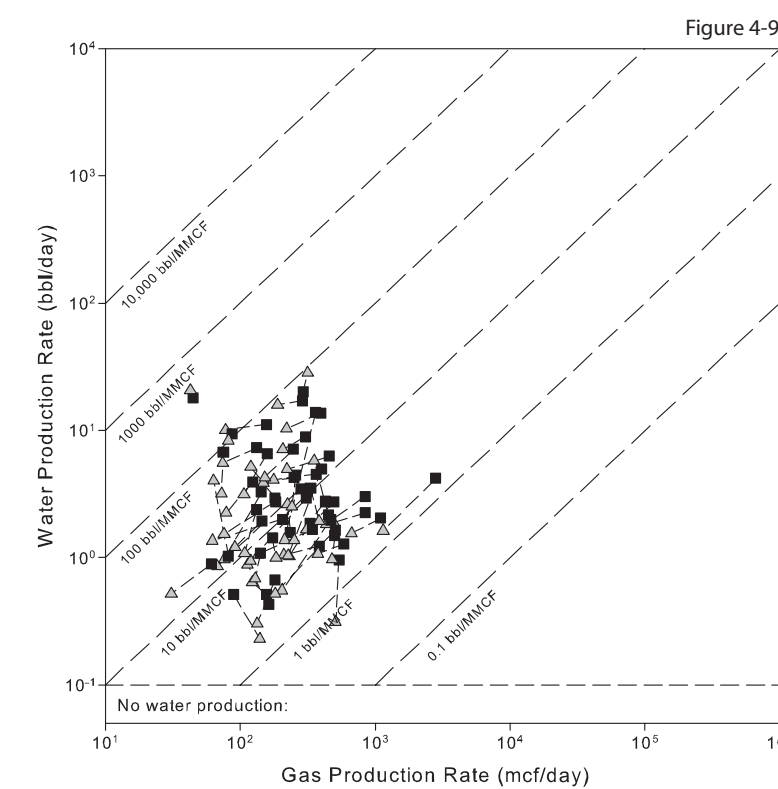

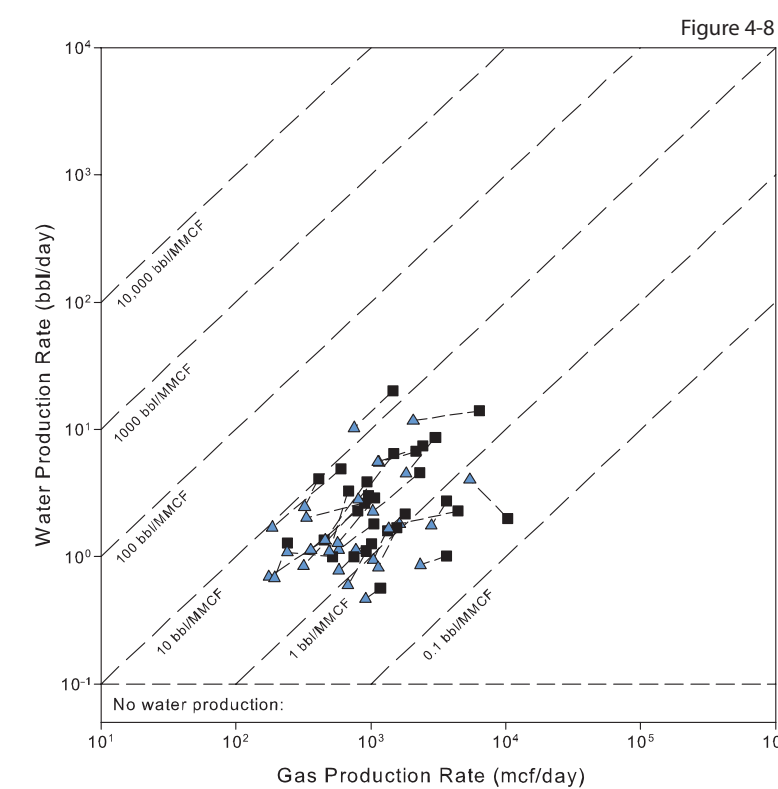

Oil vs Gas

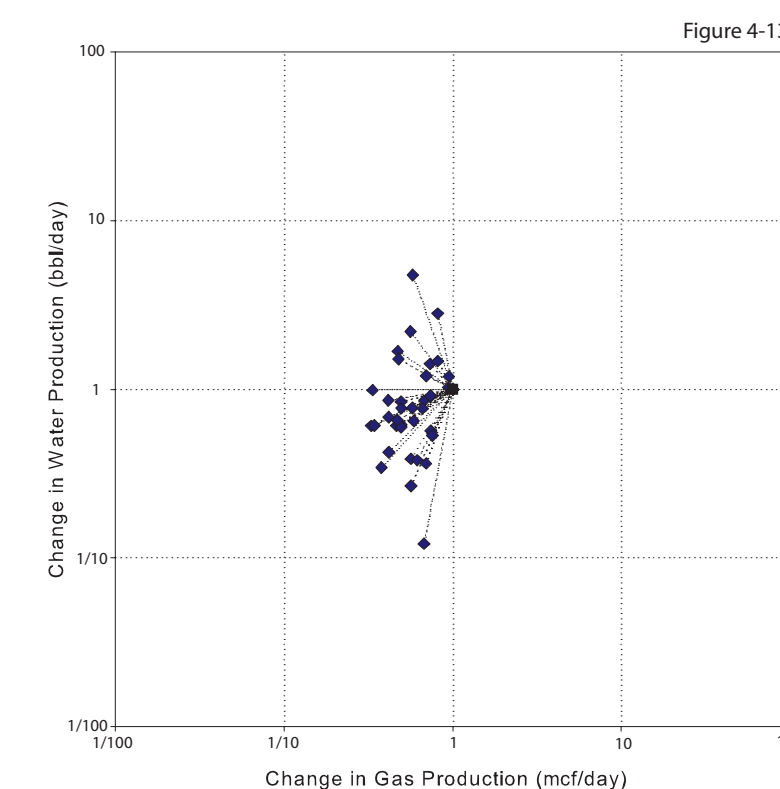

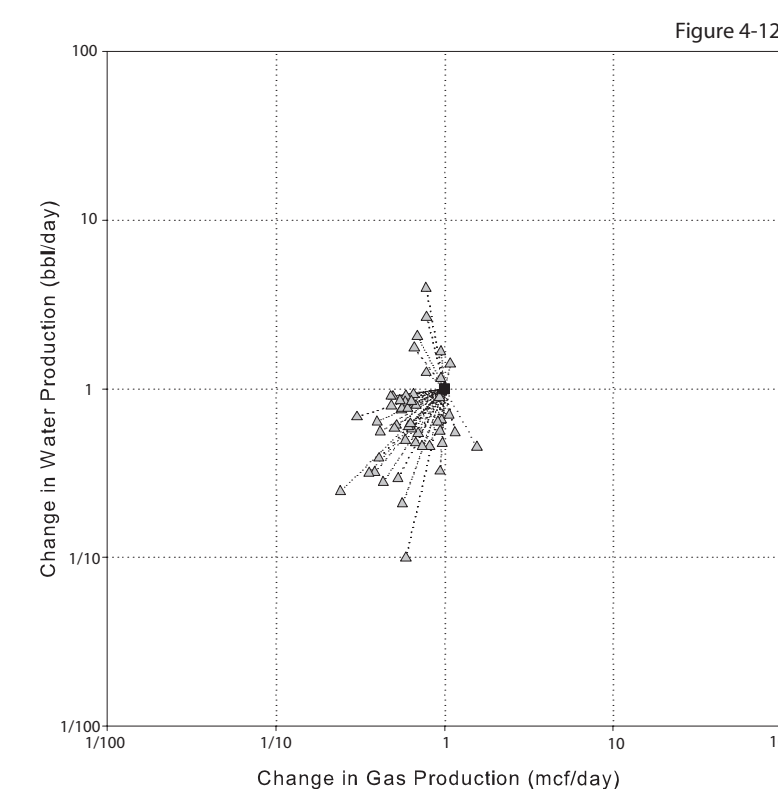

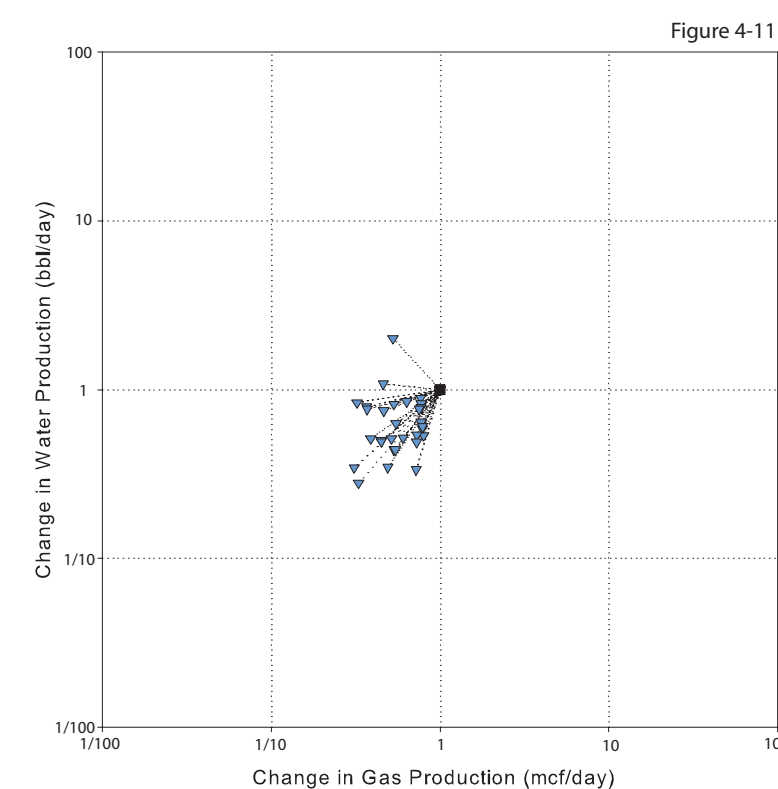

Water vs Gas

Vector Plots

Normalized Vector Plots

Location of wells studied in the Greater Wamsutter area are shown in figure 4-1, with symbols showing whether the perforations are in the upper Almond, the main Almond, or the combined (upper and main) Almond Formation. The plots are organized in three columns and four rows. The columns are organized by location of perforations. The rows show the oil-gas plots, the water-gas plots, the vector plots, and the normalized vector plots. [mcf, thousand cubic feet; mmcf, million cubic feet; bbl, barrels]
