

CD1016 – Wadi Wala Dam Area

Well CD1016 “WALA NO 1” is located below the Wadi Wala recharge dam. The linear trend fit to all data is $+21 \mu\text{S}/\text{cm}/\text{yr}$, and the R^2 is relatively high at 0.75. However, there is a large gap with only 2 measurements between 1987 and 2004. The most recent data suggests a possible downward trend since the dam was constructed, but EC is still elevated compared to the early measurements.
