

CD1147 – Ghuwair wellfield

Well CD1147 “GHUWAIR 1 (PP72)” in the Ghuwair wellfield has a long-term increasing trend of $+8.6 \mu\text{S}/\text{cm}/\text{yr}$. Two recent measurements may possibly be outliers, differing from other measurements before and after by more than $200 \mu\text{S}/\text{cm}$. There is only one measurement before 1990, in 1968. A trend fit to just the data since 1990 would have a somewhat steeper trend of increasing EC.
