

## H 2017 – Hammad basin

Well H 2017 “IRAQI ARMY M2 (H4)” is a monitoring well with the highest current rate of decline,  $-0.21$  m/yr. This current decline is in contrast to the long-term water level rise at the well since 1972. At the current rate of decline, in 2030 the B4 aquifer will have a saturated thickness of 93 percent of its maximum saturated thickness at the location of this well.
