

AL3328 – North central part of basin

Well AL3328 “KHALED NASER SALEM EL HAMDAN” is located in the north central part of the basin, in an area of isolated pumping. The fit linear trend is decreasing: $-20 \mu\text{S}/\text{cm}/\text{yr}$ ($R^2=0.09$) (fig. 16). The data is sparse and exhibits high variability, most values divided between two different trends. Future measurements could clarify the EC and EC trend.
