Appendix 2. Histograms of distance-detection data and predicted detection probabilities used to correct count data for imperfect detection for 61 species with at least 75 detections. Predictions are based on best (lowest AIC) models with reasonable precision on mean detection probability estimates (standard error < mean). Solid lines represent the average fitted detection probabilities; open circles represent observation-specific detection probabilities.

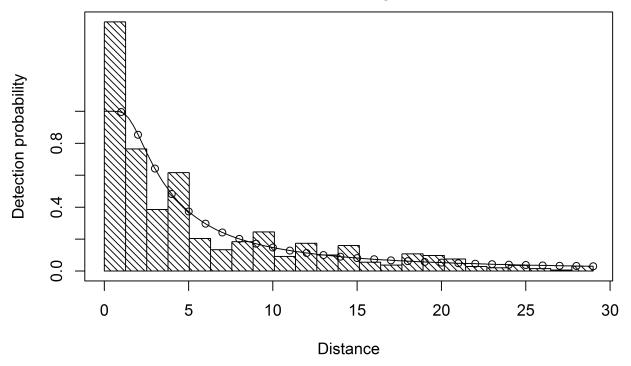

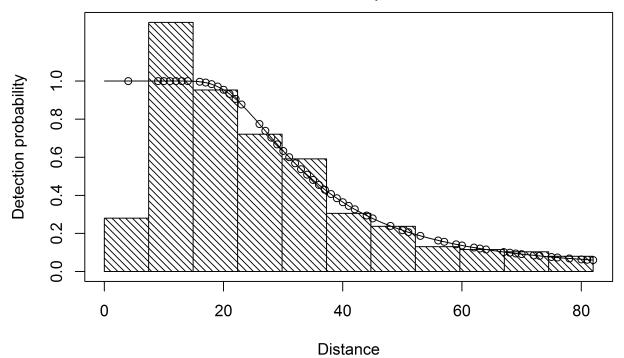

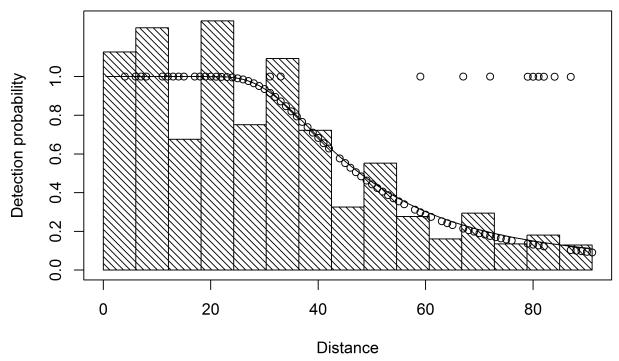

Rufous Hummingbird

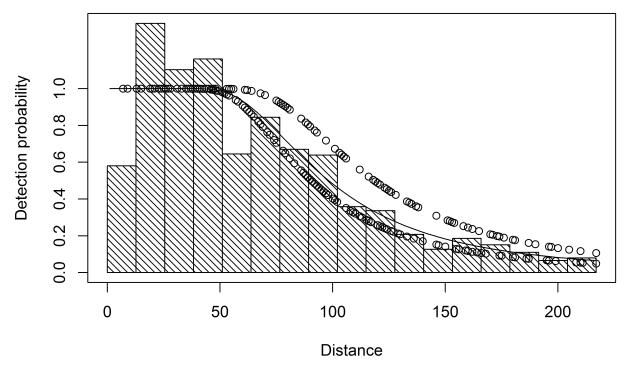

Red-breasted Sapsucker

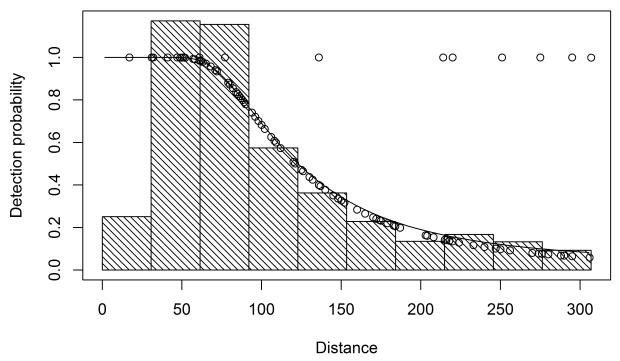

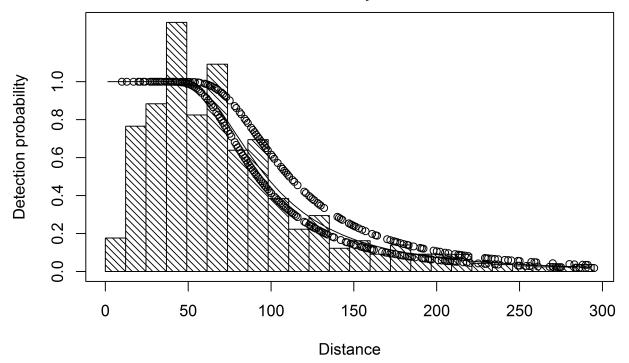

Northern Flicker

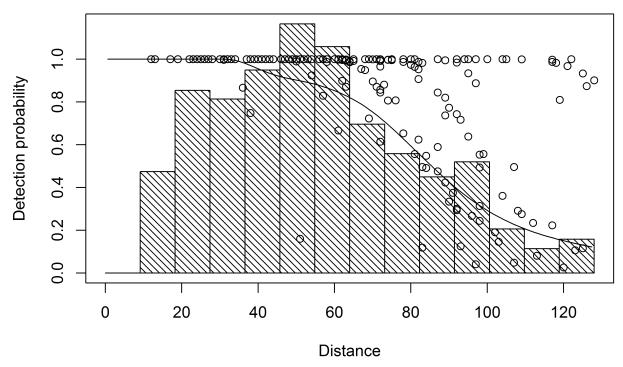

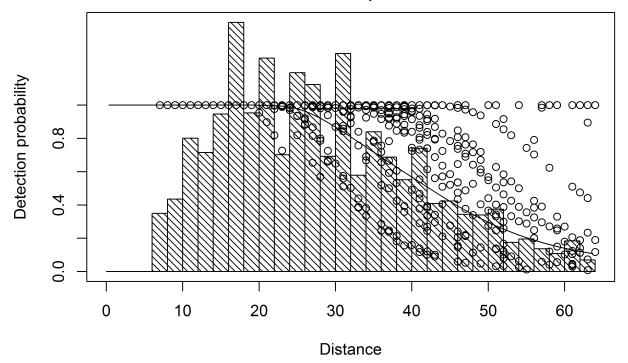

Olive-sided Flycatcher

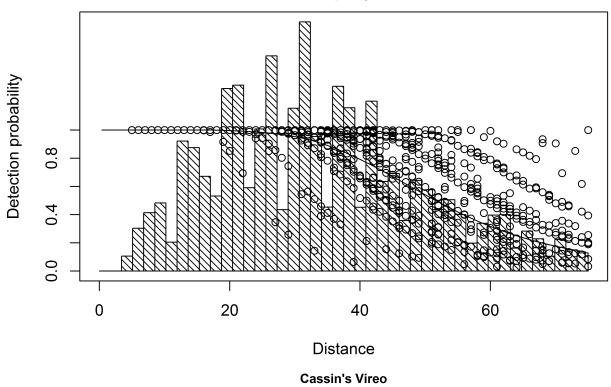

Western Wood-Pewee

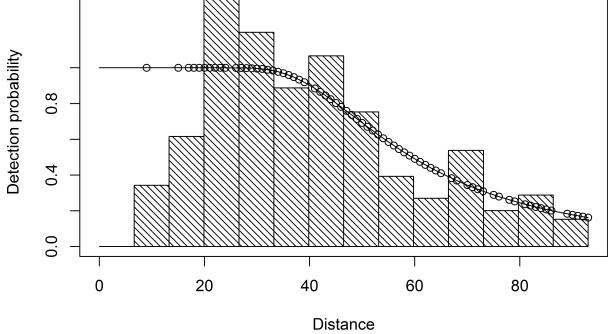

Hammond's Flycatcher

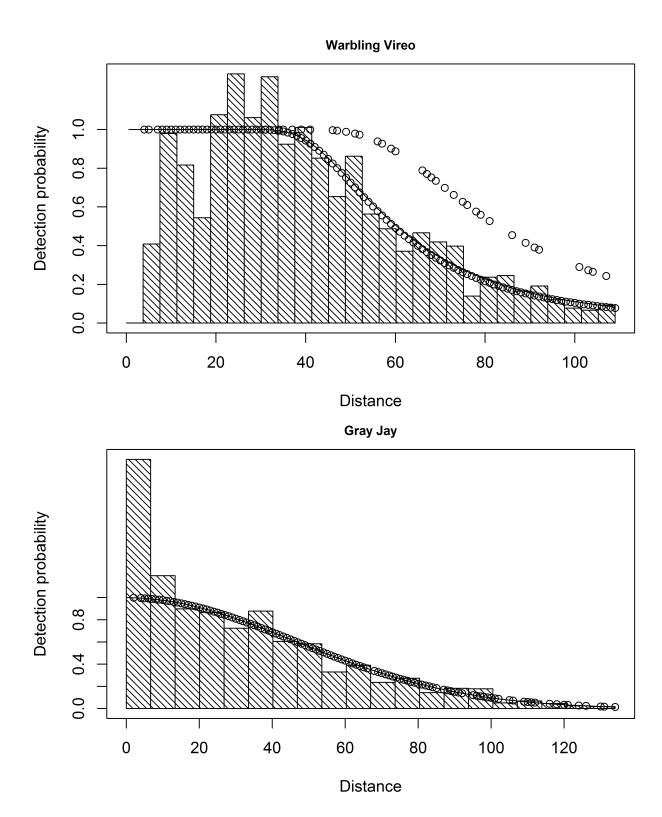

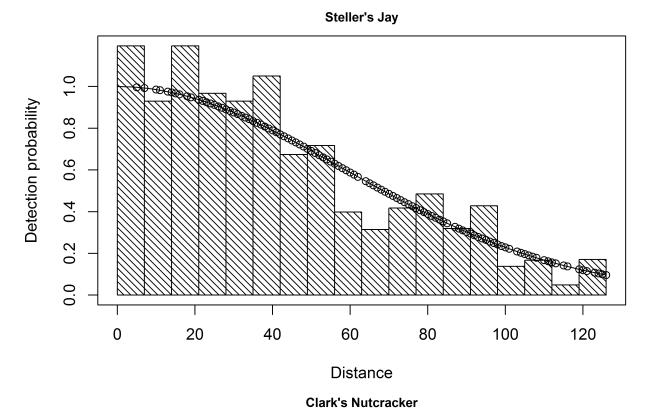

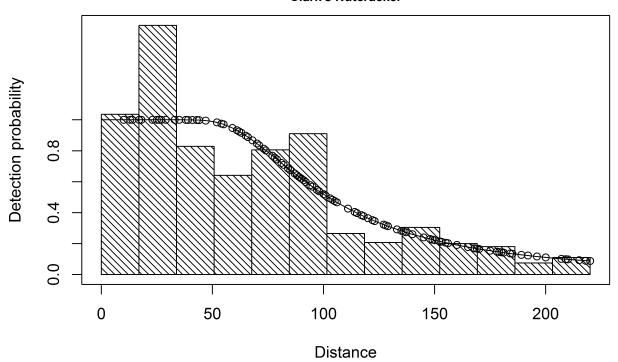

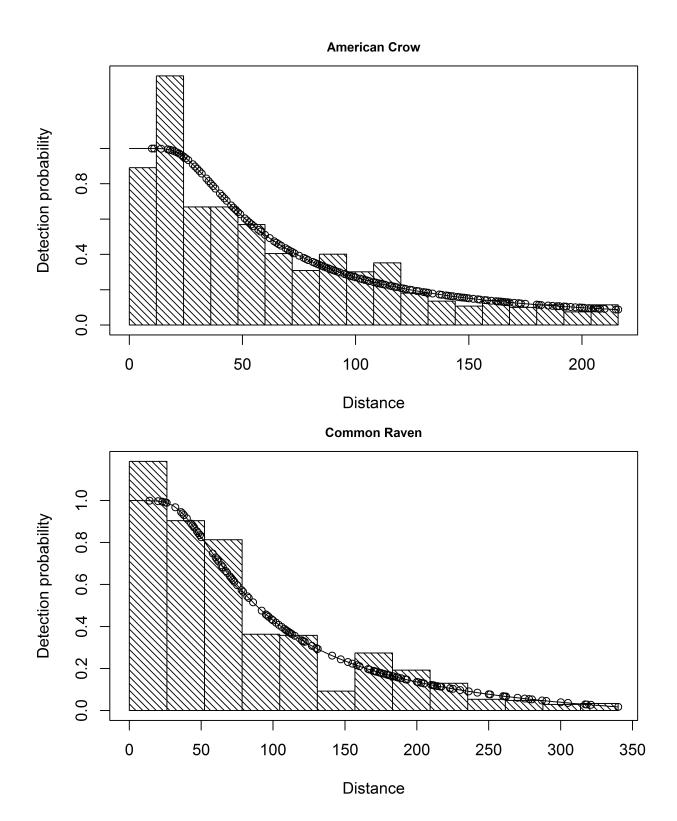

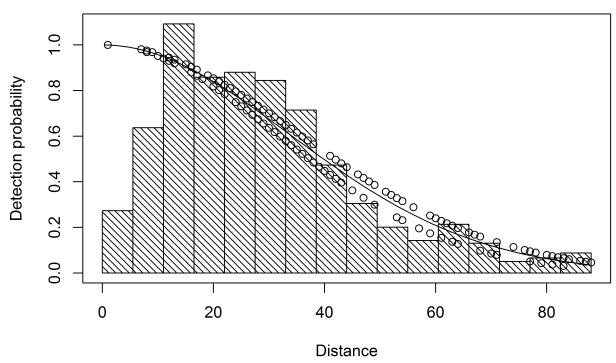

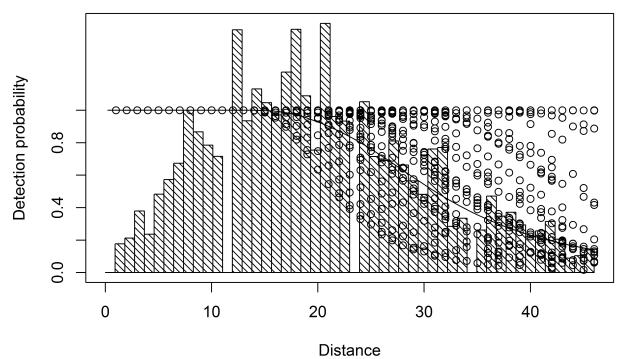

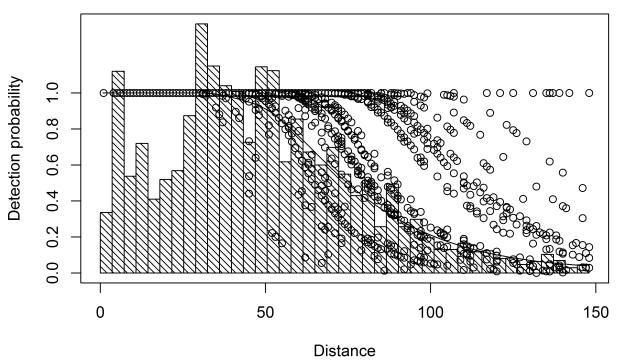

Mountain Chickadee

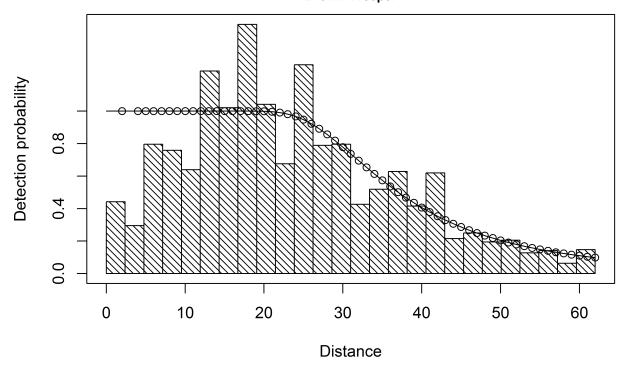

Chestnut-backed Chickadee

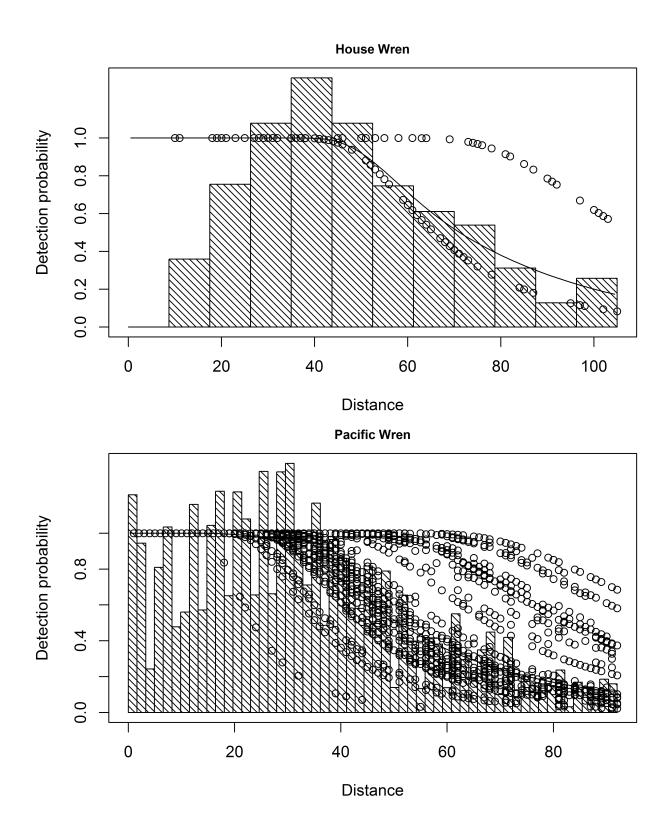

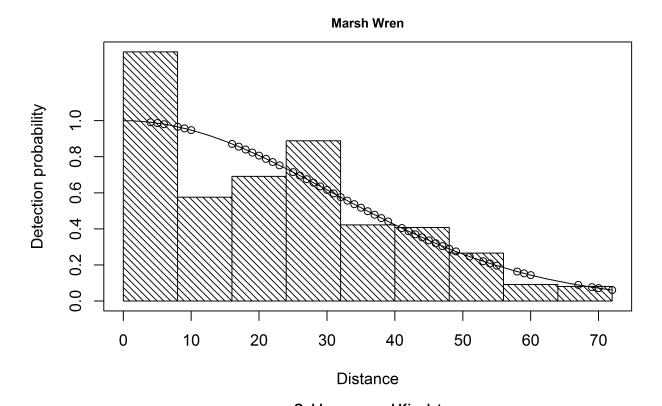

Red-breasted Nuthatch

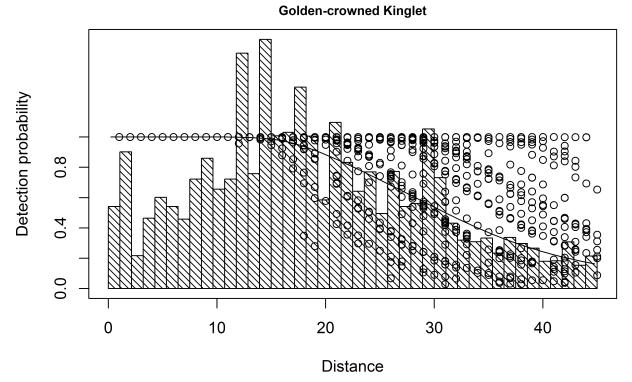

Brown Creeper

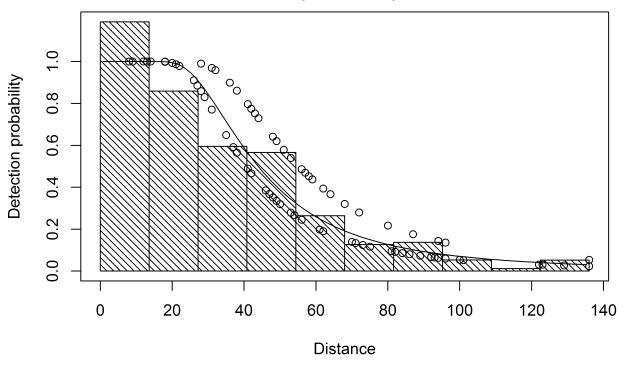

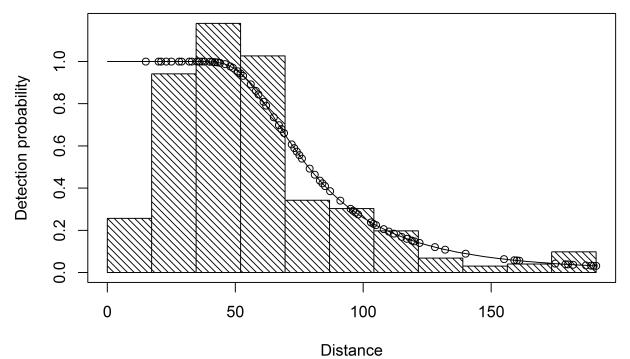

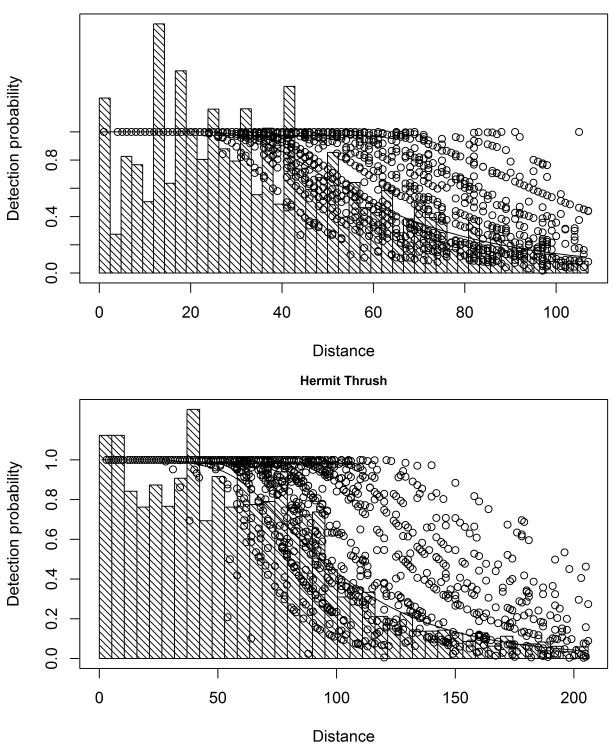

Ruby-crowned Kinglet

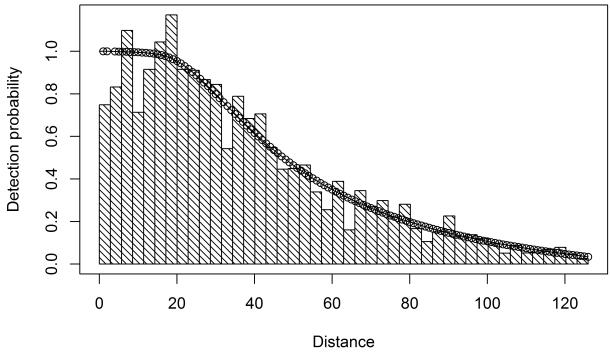

Townsend's Solitaire

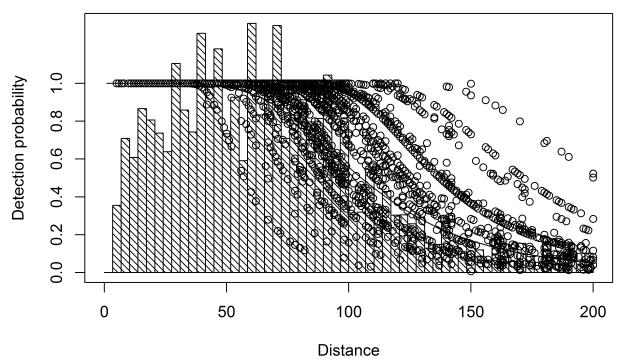

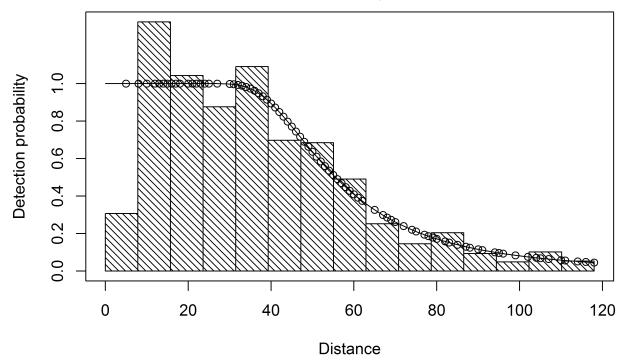

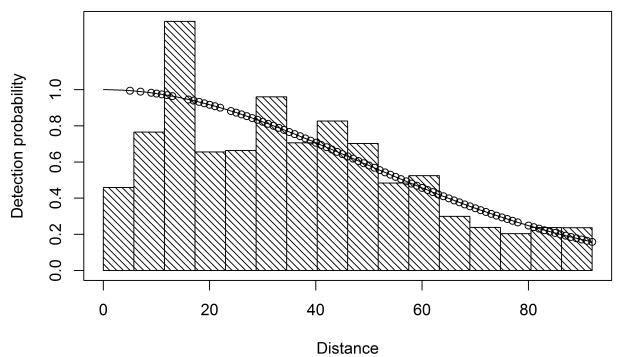

Varied Thrush

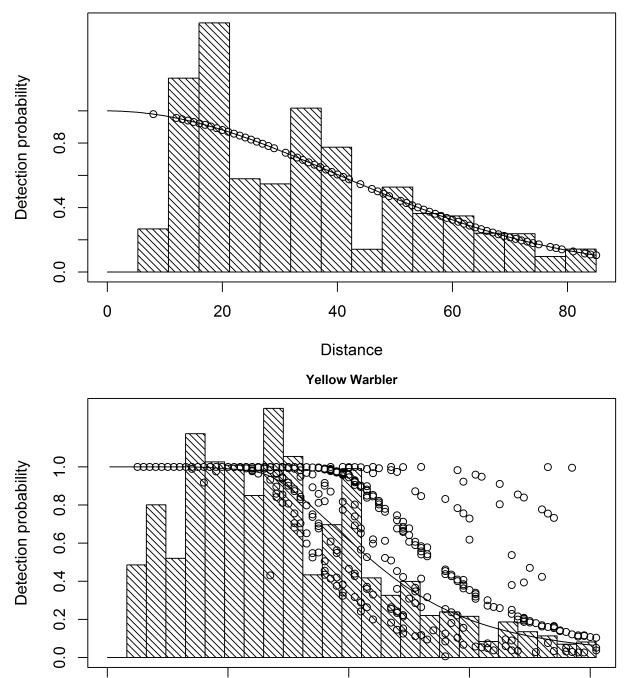

Orange-crowned Warbler

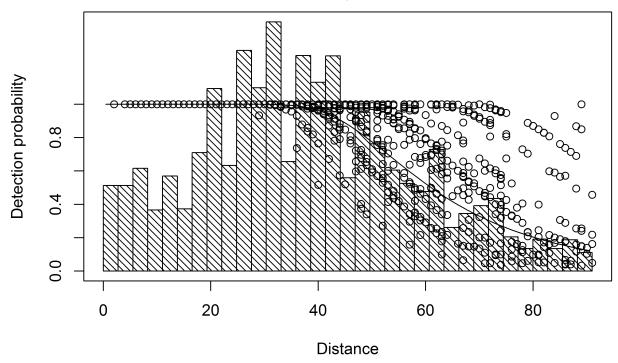

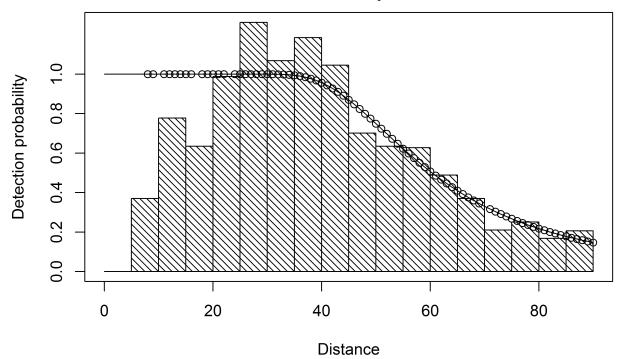

Distance

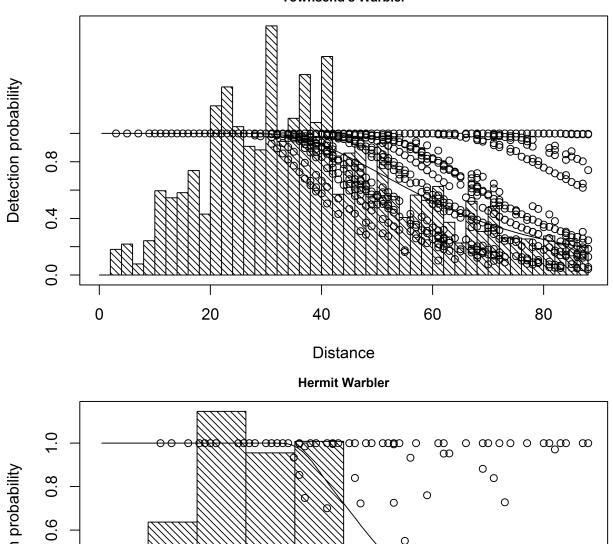

Yellow-rumped Warbler

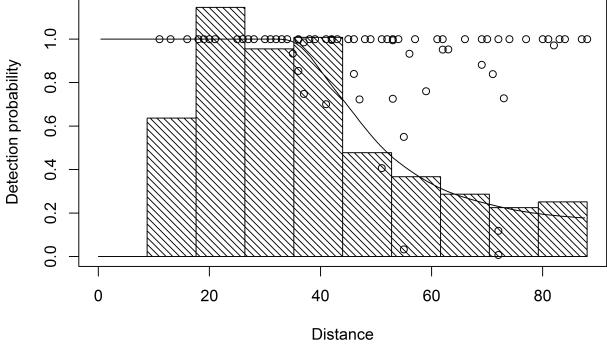

Black-throated Gray Warbler

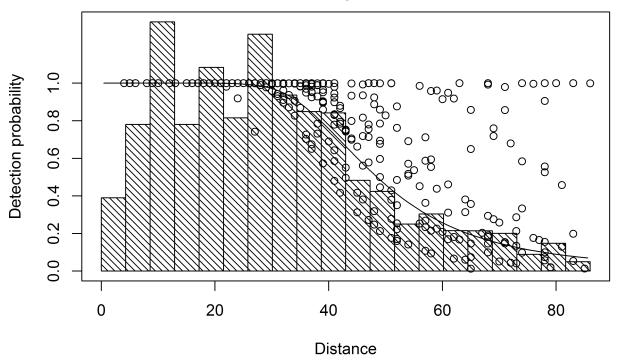

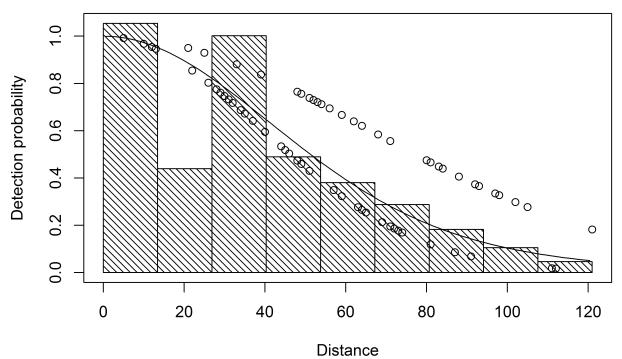

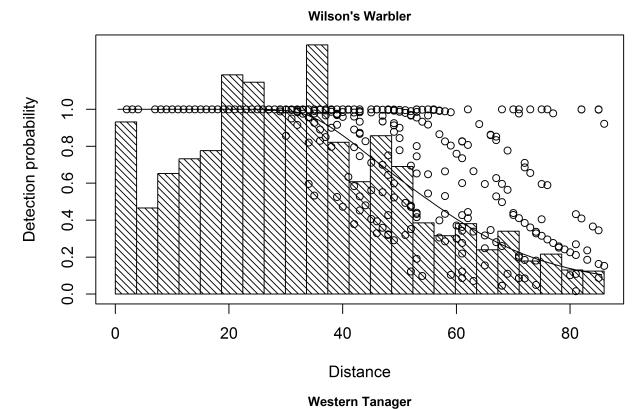

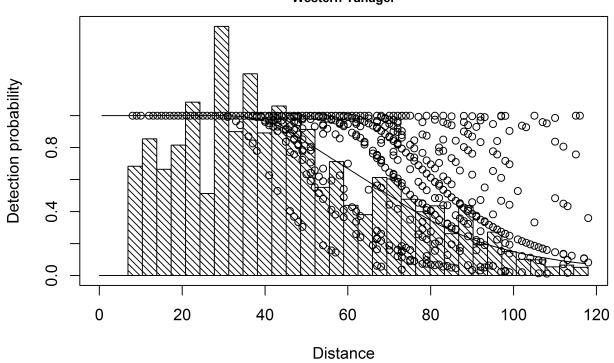

MacGillivray's Warbler

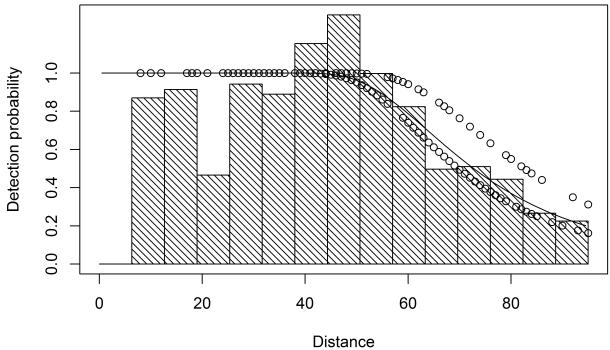

Common Yellowthroat

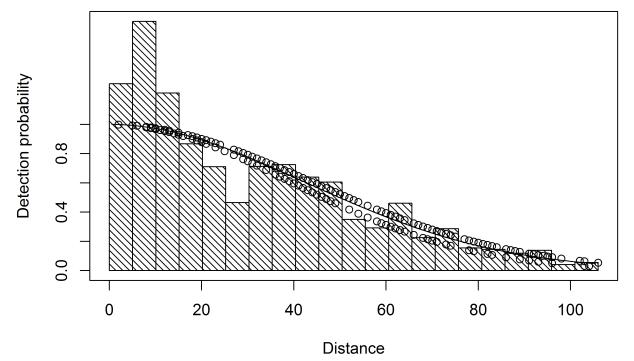

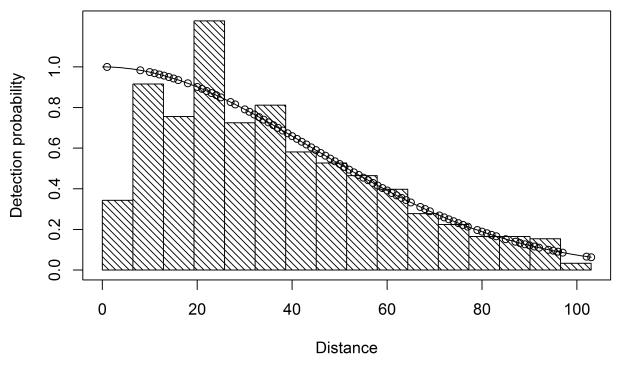

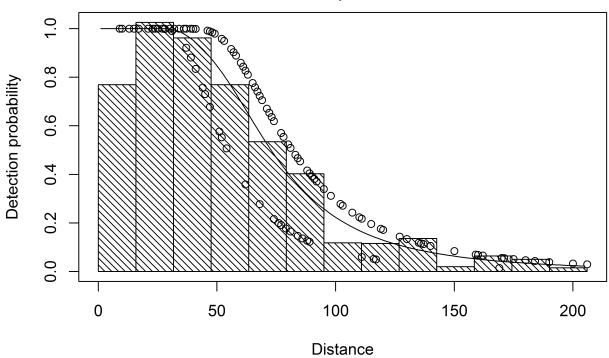

Chipping Sparrow

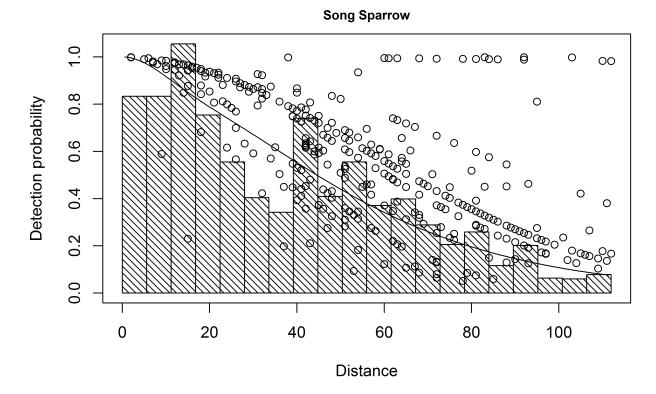

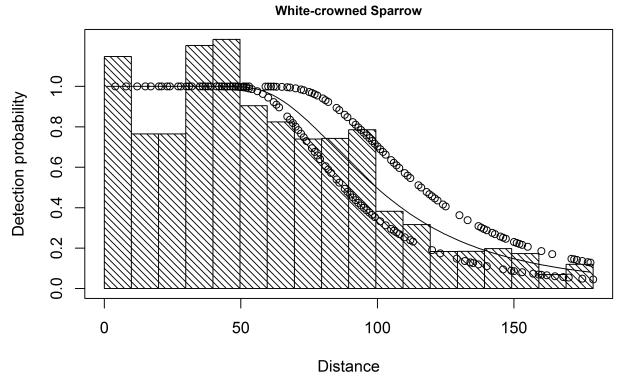

Fox Sparrow

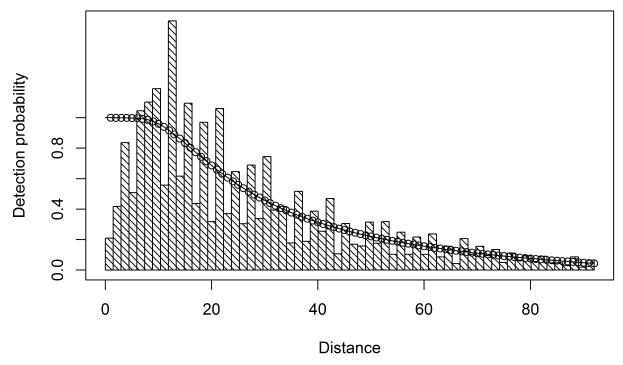

25

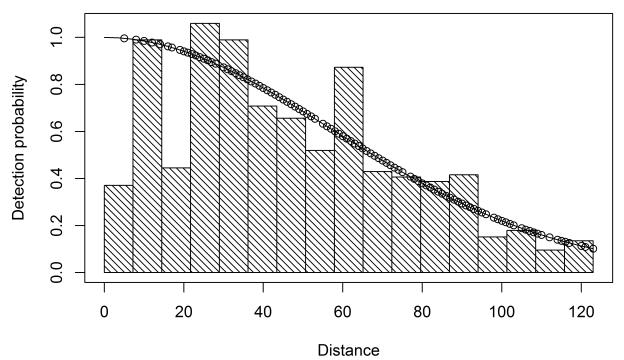

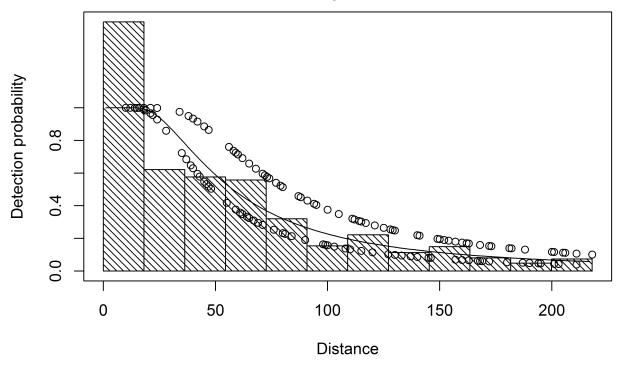

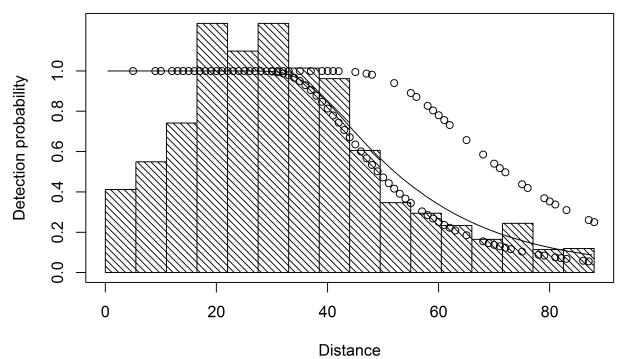

Black-headed Grosbeak

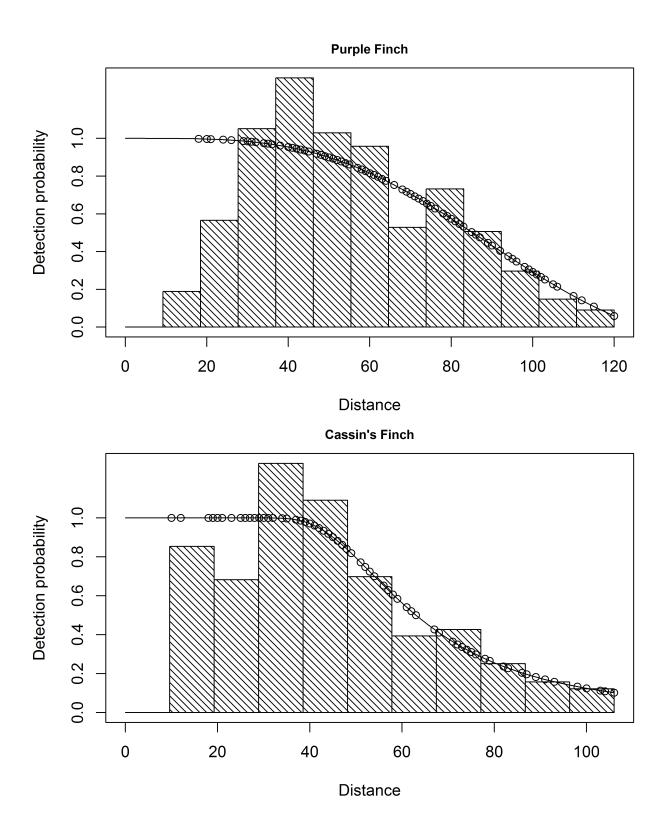

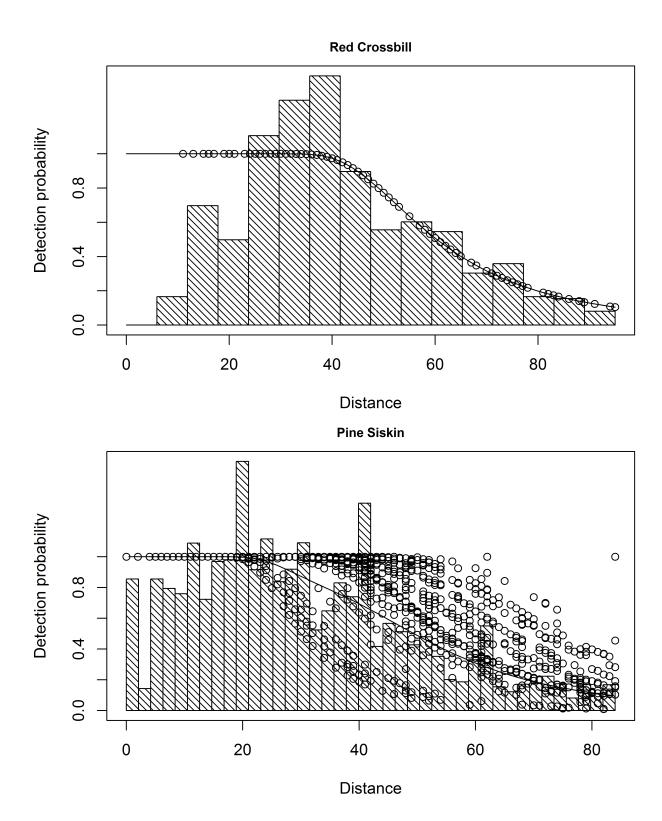

Red-winged Blackbird

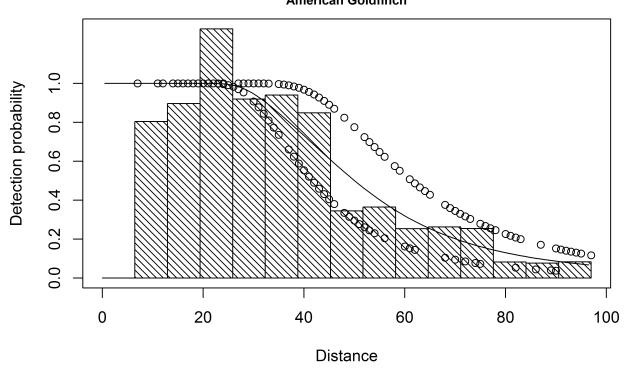

Brown-headed Cowbird

Evening Grosbeak
