FFC-3 Feed wt - day 9	2.90	1318.1	10540.0	1318.1	9221.8				
Final weight of bag (confirmed by Study Monitor and UMESC QA)	Areas Intentionally shaded								

Above weighed on Balance, S/N 14006043

¹ weight of feed plus bag (container) weight ² weight of feed to be offered to fish in test tank

- ① Bag seams allowing feed to escape. Taped up 18 JUL 11 SNS
- ② ~25g swept from cupboard top + balance when done weighing, plus more on floor. 18 JUL 11 SNS

Transcribe feed amount from "Amount to feed" column to appropriate "Original amount to feed" cell on the Feed Weight Recording Form

The 7 pgs in this packet contain calculation worksheets that were to be used to determine the 'Amount to feed' each tank of fish during the post-dosing period. The computer used for this pg went back to the lab with the senior technician on 5JUL12. Pgs 2-7 were to be completed each day by the tech who remained at the hatchery, based on the a.m. mortality counts. It appears he did the calculation but recorded it directly on the Feed weight recording form - post-dosing. When it was discovered, the tech no longer worked here so a summary was prepared, which did the calculation, and compared it to his original calculations. See "feed calculations post dosing" worksheet summary for results. No further proofing was done on this packet. QMAR15 SUS

Tracking sheet for withdrawal from original sample bags

Explanation: The feed sample to be used for determination of any contamination by Romet®, Aquaflor®, or Terramycin 200® for Fish was weighed out on 12Jun12. Originally this entire sample bag was to be sent to Eurofins Labs (now known as Lancaster Labs). It was later determined that a more precise method for the determination of oxytetracycline concentration is used at Covance Laboratories. Therefore a sample of the control feed needed to be sent there. One is to be used for the oxytetracycline contamination check and one is also needed for the analyses that will verify the concentration of the oxytetracycline medicated feed (e.g. for spiked sample quality control checks). All bags are stored at -80°C until shipped.

Original bag weight (g) 12JUN12 CONTA	Amount removed (g) [to Covance]	Sample name for Covance aliquot and total bag wt (g)	Final weight of original bag (g) [to Lancaster]	Date	Initials
2033.3	249.1	CONTAM A = 254.9	1785.6	17SEP12	SMS
1785.6	266.2	CONTROL 1 = 272.6	1520.1	17SEP12	SMS
Weighed on Balance S/N 30303922					

Additionally, the feed samples that were withdrawn for the oxytetracycline concentration verification for the first day and final day of dosing were weighed out into labeled freezer bags. Covance Labs requires the samples to be shipped in a specific sample bag, so withdrawals must be made from the original samples. The table below tracks the withdrawals.

MEMORANDUM

Date: January 7, 2014

To: The Record Study Number AEH-09-MAS-02

Subject: Note To File for the study AEH-09-MAS-02 "Field effectiveness of Aquaflor® (florfenicol) and Terramycin 200 For Fish® (oxytetracycline dihydrate) to control mortality in coolwater and warmwater finfish due to Motile Aeromonad infections."

This Note to File is to document the destruction of the unused medicated feed that was prepared for use at Spirit Lake Fish Hatchery in 2011 and 2012. Results of the concentration verification analysis have been received from Eurofins Scientific Inc and placed in the study files so the feed is no longer needed.

Attached is an index of the feed bags and final weights.
