
EXPLANATION

Except where otherwise noted, country rock consists of rhyolitic and latitic flows, tuffs, and breccia

Quartz (qtz), vein or stringer zone (str.), showing dip

Base-metal sulfide minerals (BMS)

Fault, broken zone (BZ), or gouge seam (G), showing dip. Dashed where approximately located. U, upthrown side and D, downthrown side, indicate inferred directions of relative movement

FW — Footwall

HW — Hanging wall

Strike and dip of contacts or beds

Vertical dip

Foliation in Precambrian schist

Joint

Vertical joint

Foot of raise or winze

Head of raise or winze

Raise or winze extending through level

Inclined raise

Diamond-drill hole
py = pyrite, gal = galena, sph = sphalerite, cpy = chalcopyrite
