

EXPLANATION

The symbols show the reported location and mode of occurrence of monazite. The number opposite a symbol appears in the "Locality index" in the text except that closely adjoining localities, which for geologic reasons may be described separately in the text, are included under one symbol on the map. The symbolized names accord with usage of the U. S. Board on Geographic Names if decisions were available. Place names for which no recommended spelling was available are given as they were in the original sources used for the text.

- MONAZITE OCCURRENCES**
- Monazite occurrence on unconsolidated and poorly consolidated sedimentary rocks
 - Monazite occurrence as an accessory mineral in consolidated sedimentary, metamorphic, and igneous rocks
 - Monazite occurrence in pegmatite
 - Monazite occurrence in vein
 - Monazite occurrence in carbonate
 - Monazite locality
 - International boundary
 - Unsettled boundary claim
