

MAP SHOWING LOCATIONS OF DRILL HOLES AND LINE OF DIAGRAMMATIC CROSS SECTION

EXPLANATION

Lithologic and calcite logs by W. B. Rogers, D. R. Shawe, N. L. Archibald, G. C. Simmons, and O. T. Marsh. Percent calcite estimated using acid-bottle tests: sparse, 2.5 percent; moderate, 5 percent; abundant, 15 percent; very abundant, 30 percent.  
Heavy mineral grain counts of -150 mesh size fractions from samples from DV-98, -99, -101, -102, -103, -104, -108, -111, -113A, -114, -115, and -116 by H. E. Bowers; of -150-200 mesh size fractions from samples from DV-112A by D. R. Shawe; 200 or more grains counted in each mount

DIAGRAMMATIC CROSS SECTION SHOWING SANDSTONE FACIES IN PART OF THE MORRISON FORMATION, DISAPPOINTMENT VALLEY, SLICK ROCK DISTRICT, COLORADO
