

PRELIMINARY CORRELATION OF POST-ERIE INTERSTADIAL EVENTS, CENTRAL AND EASTERN GREAT LAKES REGION, UNITED STATES AND CANADA

Like elevations given in feet (1); quoted where estimated, 100 ft = 30.5 m. Substage boundaries long dashed where inferred; author's lines of correlation quoted where age uncertain. Short-dashed lines bound events within longer events. Selected 14C ages and sample numbers shown; see table for references. Names of till in the United States are designated by Roman numerals; informal names of tills are shown in parentheses. Names of tills in Canada are printed in italics; formal and informal names are not differentiated.
