ARIZONA
1986

**THE NATIONAL GAZETTEER OF THE
UNITED STATES OF AMERICA
ARIZONA 1986**

FRONTISPIECE—The 18th century mission of San Xavier del Bac, which is located a few miles south of the center of Tucson, reflects the Spanish and native American heritages of Arizona. The name honors the Jesuit missionary Saint Francis Xavier and also includes a Spanish recording of the Papago or Pima Indian word that refers to the place where the mission is located. Bac may mean "adobe house," "ruin," or possibly "well." The name Tucson is derived from Papago words meaning "black bottom," a reference to a dark volcanic stratum in nearby Sentinel Peak.

FOREWORD

"The National Gazetteer of the United States of America" is a cooperative product of the U.S. Geological Survey and the U.S. Board on Geographic Names. The two organizations have a long history of cooperation in establishing uniform usage of geographic names on Federal maps, charts, and other publications. This cooperation, which has been a blending of technical talent and field-gathered information, has been mutually beneficial to the missions and programs of both organizations. The Board on Geographic Names is responsible for establishing official names for use throughout the Federal Government. The U.S. Geological Survey is responsible for the preparation and maintenance of the series of base maps of the Nation's lands and waters and for the publication of reports detailing the results of investigations of the Nation's mineral, energy, land, and water resources. In addition to being a principal user of the official names determined by the Board, the U.S. Geological Survey with its extensive field operations has collected much of the information necessary for making the decisions establishing those names.

The basis for the cooperation between the U.S. Geological Survey and the Board is the recognition that the use of standard geographic names is necessary for communication of geographical information. Geographic names are an essential part of our language and form a primary reference system that affects people every day of their lives. Geographic names have strong psychological significance because they are associated with the processes of thought that give people the ability to understand the world around them. They are used to identify cultural and administrative areas, define political boundaries, and determine property, mineral, and water rights.

"The National Gazetteer of the United States of America" is the result of a long-term effort to provide a standard reference to the Nation's named places, features, and areas. As early as 1892, with the support of the newly organized Board on Geographic Names and as part of the National Mapping Program, the U.S. Geological Survey began cataloging geographic names and producing a series of State gazetteers "designed as an aid in finding any geographic feature upon the atlas sheets published by the Geological Survey." Compilation was initially done by Henry Gannett, Chief Geographer, under the direction of John Wesley Powell, second Director of the Survey. Gannett was chairman of the Board on Geographic Names from 1894 until his death in 1914. Gazetteers for 12 States, Puerto Rico, Territory of Alaska, and Indian Territory (Oklahoma) were published between 1894 and 1906. However, large-scale topographic mapping, from which the name information for the gazetteers was derived, was a slow process, and inadequate map coverage led to the suspension of the program.

The U.S. Geological Survey again began the systematic collection of geographic name information in 1976 when published large-scale topographic maps were available for more than 70 percent of the country. This information comprises a major part of the computerized National Geographic Names Data Base. This volume, the fourth of the USGS Professional Paper series, "The National Gazetteer of the United States of America," is derived from the data base.

ACKNOWLEDGMENTS

The geographic names information in the Arizona volume of the National Gazetteer was compiled by the Geographic names staff in the U.S. Geological Survey in Reston, Virginia, and personnel of Arizona State University in Tempe, Arizona. Additional technical support was provided by the Arizona State Department of Lands in Phoenix.

THE NATIONAL GAZETTEER OF THE UNITED STATES—ARIZONA 1986

INTRODUCTION

By Donald J. Orth

This gazetteer lists about 36,000 geographic names in alphabetical order for places, features, and areas within the State of Arizona. It is part of a series of State, territory, and other special listings of geographic names published as U.S. Geological Survey Professional Paper 1200 and collectively titled "The National Gazetteer of the United States of America." This series is prepared in cooperation with the U.S. Board on Geographic Names. Its purpose is to provide a national standard reference for research on geographic names and a base for other data systems. Separate volumes of the National Gazetteer are identified by principal geographic area or topic and year. Each volume will be revised periodically with the year of publication as part of the title. The information in the National Gazetteer may be kept up-to-date between revisions by noting appropriate changes and new name entries published in the reports of the U.S. Board on Geographic Names. These reports may be found in libraries or can be ordered directly from the Executive Secretary, Domestic Geographic Names, Board on Geographic Names, 523 National Center, Reston, VA 22092.

UNITED STATES BOARD ON GEOGRAPHIC NAMES

The United States Board on Geographic Names is a Federal body created in 1890 and established in its present form by public law in 1947. The purpose of the Board is to resolve name problems and to eliminate duplication of effort by Federal agencies responsible for the production of maps and other publications that use geographic names. Composed of representatives of Federal agencies, the Board is authorized to establish and maintain uniform geographic name usage throughout the Federal Government. Sharing its responsibilities with the Secretary of the Interior, the Board has developed principles, policies, and procedures governing the adoption and promulgation of both domestic and foreign geographic names as well as names for under-seas and extraterrestrial features. Although established to serve the Federal Government as a central authority to which all name problems, name inquiries, and new

name proposals can be directed, the Board plays a similar role for the general public.

With respect to names used by Americans for places, features, and areas in the United States, its territories, and outlying areas, it is the policy of the Board to recognize present-day local usage or preferences where possible. To implement this policy, there is a close cooperation with State geographic boards, with State and local governments, and with the general public.

Where there is confusing duplication of local names or where a local name is derogatory to a particular person, race, or religion, the Board may disapprove such names and seek alternate local names for the features. In cases where local usage is conflicting or when a name is not used by many people, well-established documented names and names with historical significance are given added consideration. The Board also has a policy of not approving new domestic geographic names that commemorate or may be construed to commemorate living persons.

Any person or organization, public or private, may make inquiries or request the Board on Geographic Names to render formal decisions on proposed new names, proposed name changes, or names that are in conflict. Communications concerning domestic geographic names should be addressed to the Executive Secretary, Domestic Geographic Names, Board on Geographic Names, 523 National Center, Reston, VA 22092.

U.S. GEOLOGICAL SURVEY

The U.S. Geological Survey, established in 1879 as a bureau of the Department of the Interior, is the Federal Government's major earth-science fact-finding agency. The Survey's broad and diversified research programs aid in the management of the mineral, energy, land, and water resources of the United States. These programs play a vital role in furthering the Nation's welfare by providing information on the character, magnitude, location, and distribution of minerals and ores, the sources and supplies of water, and the natural Earth processes that must be understood to maintain environmental quality.

In support of the Survey's mission, its National Mapping Division provides geographic and cartographic information, maps, and technical assistance, and conducts related research in response to national mapping needs. The Division provides staff support for the

Users are urged to report errors, omissions, and any other information that may improve the usefulness of this publication.

domestic geographic names activities of the Board on Geographic Names, manages the national geographic names data system, provides a geographic names information service within the Survey and to the outside users of names information, and conducts research in support of national name standardization programs.

NATIONAL GEOGRAPHIC NAMES DATA BASE

This Gazetteer is derived from the National Geographic Names Data Base, which is part of a computerized Geographic Names Information System developed by the U.S. Geological Survey. The data base presently contains information for about two million names used throughout the United States, its territories, and outlying areas. Information within the system can be retrieved, manipulated, and arranged to meet the special needs of a wide variety of users in government, education, business, and industry, as well as those of private individuals. The system can furnish alphabetical and special listings in the form of bound reports, magnetic tapes, and microfiche. Information about available services and costs of the Geographic Names Information System (GNIS) may be obtained by writing to the Chief, Branch of Geographic Names, U.S. Geological Survey, 523 National Center, Reston, VA 22092.

GUIDE TO THE USE OF THE GAZETTEER

This gazetteer lists geographic names found on various maps, charts, and in other published documents; the names of railroads, streets, and roads are not included. The names are listed in alphabetical order and each is followed by seven categories of information. Except for variant name listings, each category of information is in a separate column on the gazetteer pages; the columns contain the following information, in order from left to right:

Name (1st column)—This column lists both the primary reference names and variant spellings as well as variant names, for the same features, in alphabetical order. Each variant spelling and name is listed in two places in the first column: under the principal name and in its proper alphabetical order in the gazetteer with a “see” reference to the primary name. The proper names of features, places, or areas generally are composed of two parts—a specific or substantive part and a generic part. The specific part normally precedes the generic in the majority of names in the United States. In these cases, the names are listed in alphabetical order according to the specific parts of the names, letter-by-letter, from

beginning to end, ignoring spaces and printing marks. In the names of physical features where the generic parts precede the specific parts, the order is arbitrarily reversed in the gazetteer in order to make it easier to look up a name. In each case, the specific part is listed first, followed by a comma and the remaining part of the name:

Adams, Mount
Ann, Lake
Saint Louis, Bay
Woods, Lake of the

Definite-form names are also listed with the specific parts of the names first:

Crossing, The
Mesa, La
Racetrack, The

Exceptions to the above occur when populated places, localities, civil divisions, or any other cultural features (city, village, county, township, crossroad, and railroad siding) are named for physical features. These are always listed in normal order even though the generic parts of the names may precede the specific parts. A village or locality called “Mount Calvary” is listed in that order, while a physical feature with the same name is listed in reverse order, “Calvary, Mount.”

Radio and television stations are listed together at the beginning of each alphabet letter according to their call letters followed by the type of station (AM, FM, or TV) and by the names of the communities they serve.

A few names listed in the gazetteer are followed by descriptive words in parentheses. These words or phrases give special information about name usage or about the specific place or feature. This information is generally self-explanatory, for example: (ruins), (subdivision), (shopping center), and (abandoned) refer to the present state of the place; and (old channel), (submerged), (foot bridge), and (siding) provide further description. The descriptive word (historical) refers to a feature that no longer exists.

Feature Class (2nd column)—The terms listed in this category identify the kinds of features or places to which the names apply. The meaning of the terms are very broad so that similar kinds of landscape features can be grouped into general classes. For example, the term “stream” includes all kinds of flowing water which locally may be called a creek, run, river, branch, bayou, or fork. See page xxv for a list of these terms and their definitions.

Status (3rd column)—Geographic names can be classified according to their use or official status as determined by the U.S. Board on Geographic Names. This category of information gives the status of each name in the gazetteer as determined by the Board. The designators and their meanings shown in this column are as follows:

BGN (date): This designator indicates that the written form of the name and its application has been determined by the Board on Geographic Names (BGN) to be official for use throughout the Federal Government. If a year date follows the "BGN" designation, the name and its application were subject to special research and decision by the Board and the decision was published during the year shown.

US (date): A geographic name and its applications listed with this designator were established by an Act of Congress and the name is official by law. The date is the year the law was passed.

ADMIN: The names of certain kinds of geographical entities such as counties, parks, forests, and townships, logically fall within the administrative jurisdictions of Federal, State, and local governmental organizations. The authority for establishing these names is based on recognized organic, inherent, or constitutional rights. The names listed with this designator are official for Federal usage.

UNOFF: The Board on Geographic Names has not established these names as official. They are included in the gazetteer for reference purposes.

VARIANT: A name with this designator is a written variant for a place, feature, or area that has another name as its official name. A "see" reference to the official name is given on the line below the entry along with information about the named entity. However, since this gazetteer is designed to be a reference tool, it does not always reflect the true relationship between the current and the historical name of a place. Historical places, such as forts, Indian villages, and small settlements, that once existed close to or within the current boundaries of a present-day populated place often are listed as separate places, but are also listed as appropriate variants.

County (4th column)—This is the name of the county in which the listed entity is located. If the place, feature, or area lies in more than one county, the county listed is the one in which the center of the feature is found; or, in the case of a stream, valley, or arroyo, the county listed is the one in which the feature's mouth is located. Figure 1 outlines the counties of Arizona.

Geographic Coordinates (5th column)—Latitudes and longitudes are given for the mouths of streams and valleys; centers of bays, islands, lakes, populated places, and other areal features; the extremities of points of land; the summits of mountains and hills; and the dams of reservoirs. The first two numbers are *degrees*, followed by two numbers for *minutes*, and the last two for *seconds* N (north) latitude. This sequence is followed by three, two, and two numbers respectively representing degrees, minutes, and seconds W (west) longitude. Example: 354835N1104413W reads 35 degrees, 48 minutes, 35 seconds north latitude and 110 degrees 44 minutes, 13 seconds west longitude.

Source (6th column)—The geographic coordinates are given for the source or heads of streams, valleys, and arroyos.

Elevation (7th column)—The specific or average elevation is given in feet above the National Geodetic Vertical Datum of 1929 (approximately sea level) for tops of peaks, mountains, ridges, and hills, the surfaces of lakes and reservoirs, the high points of passes and low points of basins, and the approximate centers of populated places.

Map (8th column)—Arizona is subdivided into 1,971 7.5-minute quadrangle areas, each of which is covered by a 1:24,000-scale or 1:25,000-scale topographic map published by the U.S. Geological Survey. This column indicates the name of the map on which the named place or feature may be located, though not always labeled by name, since not all names are shown on the topographic maps. When ordering topographic maps from the U.S. Geological Survey's Distribution Branch refer to the map name, which may be found on the "Alphabetical List of U.S. Geological Survey Maps of Arizona" on page xiii. (Several names of U.S. Geological Survey maps have been abbreviated because of limitations of space. Both the full name and its abbreviation appear in the Alphabetical List.)

Figure 1.—Map of Arizona Counties

State indexes to topographic maps are available from:

Branch of Distribution

Map Distribution
Federal Center, Bldg. 41
Box 25286
Denver, CO 80225
(303) 234-7476
FTS 776-7476

Some names appear only on U.S. Forest Service maps. Even though the names are not labeled on U.S. Geological Survey maps, they will be referenced to the 1:24,000-scale topographic map on which the named place or feature is located.

The U.S. Forest Service administrative areas in Arizona include the following:

Apache-Sitgreaves National Forest (NF)
Coconino NF
Coronado NF
Kaibab NF
Prescott NF
Tonto NF

Maps for these areas may be obtained from:

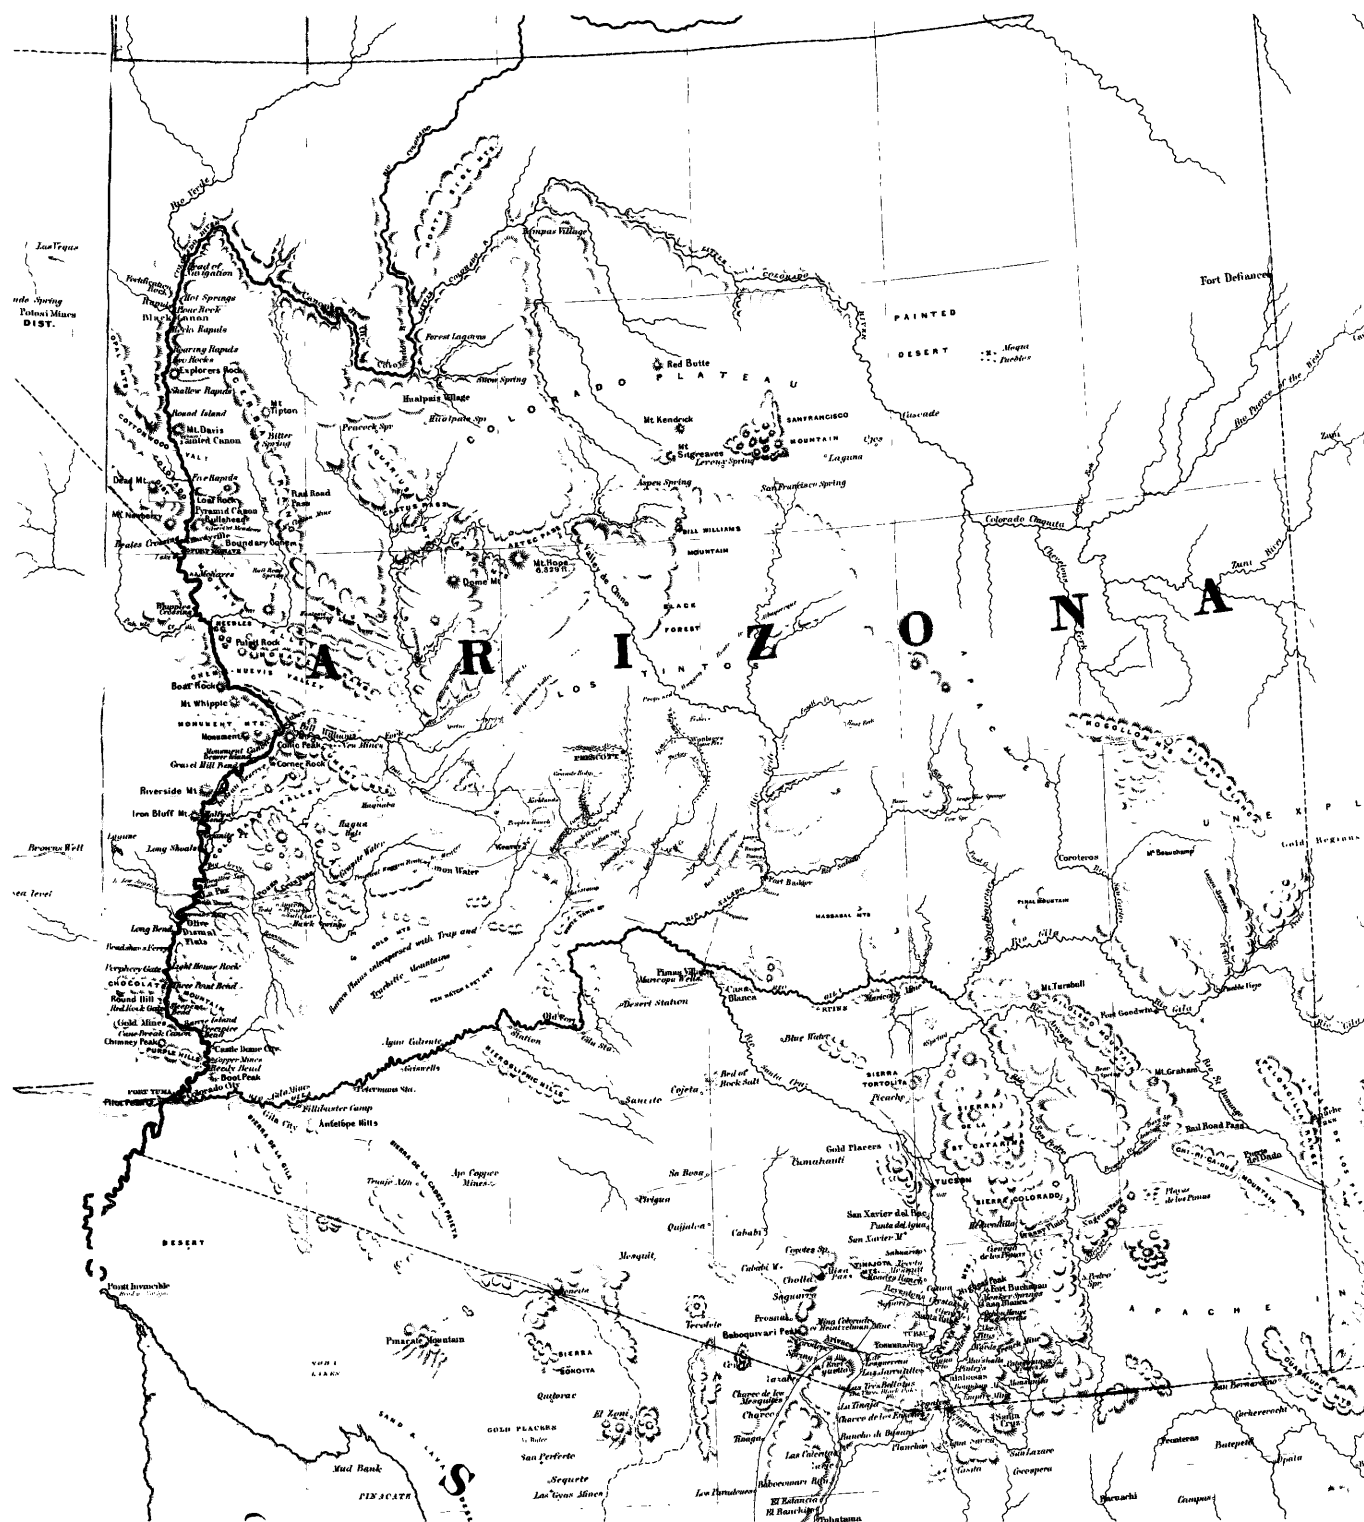

Figure 3.—William Hartley's Map of Arizona, 1865. This map depicts Arizona at the close of the American Civil War. The Gila River valley had been acquired from Mexico by the Gadsden Purchase of 1853, the Nation's last major change in its southern boundary. The Territory of Arizona had been separated from the Territory of New Mexico in 1863, and large areas of Arizona, especially in the north, were still unexplored. Note that the density of placenames is much greater along the Colorado River where steamboats conducted most of the commerce of the Territory until the coming of the railroads in the 1880's. Not founded until 1870, Phoenix is not shown.

ARIZONA

Prior to the 1500's, territory now called Arizona was inhabited by Indians whose agrarian civilization left behind the famous pueblo ruins and cliff dwellings. Beginning in 1539, Spanish explorers entered the region in quest of the vast riches of gold rumored to be in the area. Their explorations were unproductive and the rumors of gold merely fabrications.

Spain took formal possession of this area in 1595 and called it New Mexico. Spanish missionaries followed in the 17th century and entered New Mexico to convert the Indians to Christianity. Under the rule of Spain, officials applied the name Sonora to what is now southern Arizona, and considered what is now northern Arizona as part of New Mexico. Because of its abundant mineral resources, especially silver, and because of its size, it became necessary to apply a placename to clarify areas referred to in reports. By 1730, Spaniards from the Basque country renamed the area Arizonac, either from the Basque words for "good oak trees" or "valuable ores," or from the Pima Papago Indian words, ali ("small") and shonak ("place of the spring") or "place of the small spring."

In 1848, at the close of the Mexican-American War, the United States received from Mexico nearly all the land between Texas and the California coast. When California became a State in 1850, the remainder of the Mexican Cession became the Territory of New Mexico. The Territory was enlarged by the land to the south of the Gila River, which was bought from Mexico in 1853 and is known as the Gadsden Purchase. Miners soon entered the area as a result of the Gadsden Purchase,

and in 1854 they proposed to the Congress that a new Territory be established. They offered three possible names: Gadsonia, after the negotiator of the Purchase; Pimeria, from the local Pima Indians—a name used by the Spanish; or Arizona, from the old mining district. In 1856 a convention in Tucson, one of whose leaders was from the Arizona Mining and Trading Company, approved the name Arizona. The Confederate States of America declared Arizona to be a Territory of the Confederacy in 1861, but it was soon occupied for the Union by California volunteers. The Congress made Arizona a United States Territory in 1863 and the 48th State in 1912.

Arizona's capital was moved from place to place until Phoenix was chosen in 1889. The Territorial Government was organized at Navajo Springs at the end of 1863. It moved in early 1864 to Camp Whipple, near Prescott, and then to Prescott itself later that year. From 1867 to 1877 Tucson was the capital, followed by Prescott again from 1877 to 1889. The name Navajo Springs was given in 1853 by Lieutenant (later Brigadier General) Amiel W. Whipple, U.S. Army (1818-1868), who noticed that the Navajo Indians used the water at the site and suggested it might be a stopping place for emigrants. He gave his name also to Camp Whipple, the military post set up to protect the miners near what is now Prescott. Prescott was named in 1864 for William H. Prescott (1796-1859), the historian of Spanish America. Tucson is derived from the Papago Indian words for "black bottom," the original name for Sentinel Peak, at whose base Tucson lies. Because the earliest European settlers found at the site the remains of an ancient settlement, Phoenix was named after the mythological bird that rose from its own ashes after it was consumed by fire. The name was suggested by Darrell Duppa, an Englishman who was one of the first inhabitants.

GLOSSARY

By Sam Stulberg and Roger L. Payne

Listed below are the common terms used to categorize each place, feature, or area identified by a geographic name. These terms appear in the second column of information on the gazetteer page. The terms and their definitions are applied broadly; they are not a dictionary of balanced, exclusive, or precise terminology for the identification and definition of cultural and natural features. Some examples of commonly used generic names are provided at the end of each definition to assist in understanding the range of meaning represented by the feature term. A name generic in plural form is identified by a term in singular form; a name like "Relic Islands" is identified as "island." The term "populated place" is abbreviated "ppl."

airport: a manmade facility maintained for the use of aircraft (airfield, airstrip, landing field, landing strip).

arch: a natural archlike opening in a rock mass (bridge, natural bridge, sea arch).

area: any one of several areally extensive natural features not included in other categories (badlands, barren, delta, fan, garden).

arroyo: a watercourse or channel through which water may occasionally flow (coulee, draw, gulley, wash).

bar: a natural accumulation of sand, gravel, or alluvium, or ledge of rock or coral forming an underwater or exposed embankment (ledge, reef, sandbar, shoal, spit).

basin: a natural depression or relatively low area enclosed by higher land (amphitheater, cirque, pit, sink).

bay: an indentation of a coast or shoreline enclosing a part of a body water; a body of water partly surrounded by land (arm, bight, cove, estuary, gulf, inlet, sound).

beach: the sloping shore along a body of water that is periodically washed by waves or tides and is usually covered by sand or gravel (coast, shore, strand).

bench: an area of relatively level land on the side of an elevation such as a hill, ridge, or mountain where the slope of the land rises on one side and descends on the opposite side (level).

bend: a curve in the course of a stream and (or) the land within the curve; a curve in a linear body of water (loop, meander).

bridge: a manmade structure carrying a trail, road, or other transportation system across a body of water or depression (causeway, overpass, trestle).

building: a manmade structure with walls and a roof for protection of people and (or) materials; churches, hospitals, and schools are special types of buildings and are assigned individual categories.

canal: a manmade waterway used by watercraft or for drainage, irrigation, mining, or water power (ditch, lateral).

cape: a projection of land extending into a body of water (lae, neck, peninsula, point).

cave: a natural underground passageway or chamber, or a hollowed out cavity in the side of a cliff (cavern, grotto).

cemetery: a place or area for burying the dead (burial, burying ground, grave, memorial garden).

channel: a linear deep part of a body of water through which the main volume of water flows and which is frequently used as a route for water craft (passage, reach, strait, thorofare, thoroughfare).

church: a building used for religious worship (chapel, mosque, synagogue, tabernacle, temple).

civil: designates a political division formed for administrative purposes (borough, county, town, township).

cliff: a very steep or vertical slope (bluff, crag, head, headland, nose, overhang, pali, palisade, precipice, promontory, rim, rimrock).

crater: a circular depression at the summit of a volcanic cone or one on the surface of the land caused by either volcanism, meteoritic impact, or underground subsidence; a manmade depression caused by an explosion (caldera, lua).

crossing: a place where two or more routes of transportation form a junction or intersection (overpass, underpass).

dam: a water barrier or embankment built across the course of a stream or into or within a body of water to control and (or) impound the flow of water (breakwater, dike, jetty).

falls: a perpendicular or very steep descent of water in the course of a stream (cascade, cataract, waterfall).

flat: a relatively level area within a region of greater relief (clearing, glade, playa).

forest: a bounded area of woods, forest, or grassland under the administration of a political agency (national forest, national grasslands, State forest); see "woods."

gap: a low point or opening between hills or mountains or in a ridge or mountain range (col, notch, pass, saddle, water gap, wind gap).

geyser: an eruptive spring from which hot water, steam, and (or) mud, are periodically thrown.

glacier: a body or stream of ice moving outward and downslope from an area of accumulation; an area of relatively permanent snow/ice on the top of or side of a mountain (icefield, ice patch, snow patch).

gut: a relatively small coastal waterway connecting larger bodies of water or other waterways (creek, inlet, slough).

- harbor:** a sheltered area of water where ships or other watercraft can anchor or dock (hono, port, road, roadstead).
- hospital:** a building where the sick or injured may receive medical or surgical attention (infirmary).
- island:** an area of dry or relatively dry land surrounded by water or low wetland (archipelago, atoll, cay, hammock, hummock, isla, isle, key, moku, rock).
- isthmus:** a narrow projection of land in a body of water connecting two larger land areas.
- lake:** a natural body of inland water (backwater, lac, lagoon, laguna, pond, pool, resaca, waterhole).
- lava:** a formation or feature resulting from the consolidation of molten rock on the surface of the Earth (kipuka, lava flow).
- levee:** a natural or manmade embankment flanking a stream (bank, berm).
- locale:** a place at which there is or was relatively minor human occupation or activity; does not include populated places (ppl), mines, and dams (battlefield, camp, farm, railroad siding, ranch, ruins, site, station, windmill).
- mine:** a place or area from which commercial minerals are or were removed from the Earth; does not include oilfield (pit, quarry, shaft).
- oilfield:** an area where petroleum is or was removed from the Earth.
- other:** this category is for miscellaneous named man-made entities that cannot readily be placed in the other feature classes listed here.
- park:** a place or area set aside for recreation or preservation of a cultural or natural resource and under some form of governmental administration; does not include a forest (national historical landmark, national park, State park, wilderness).
- pillar:** a vertical-standing, often spire-shaped, natural rock formation (chimney, monument, pinnacle, pohaku, rock tower).
- plain:** a region of general uniform slope, comparatively level and of considerable extent (grassland, highland, kula, plateau, upland).
- ppl:** populated place: a place or area with clustered or scattered buildings and a permanent human population (city, settlement, town, village).
- range:** a chain of hills or mountains; a somewhat linear mountainous or hilly area (cordillera, sierra).
- rapids:** a fast-flowing section of a stream, often shallower than other sections and with exposed rocks or boulders (riffle, ripple).
- reserve:** a tract of land set aside for a specific use—does not include forests, civil divisions, or parks.
- reservoir:** an artificially impounded body of water (lake, tank).
- ridge:** an elevation with a narrow, linear crest; may be part of a hill or mountain (crest, cuesta, escarpment, hogback, lae, rim, spur).
- school:** a building or group of buildings used as an institution for study, teaching, and learning (academy, college, high school, university).
- sea:** a large body of salt water (gulf, ocean).
- slope:** a gently inclined part of the Earth's surface (grade, pitch).
- spring:** a place where underground water flows naturally to the surface of the Earth (seep).
- stream:** a linear body of water flowing on the Earth's surface (anabranche, awawa, bayou, branch, brook, creek, distributary, fork, kill, pup, rio, river, run, slough).
- summit:** a prominent elevation rising above the surrounding level of the Earth's surface; does not include ridges and ranges (ahu, bald, berg, butte, cerro, colina, cone, cumbre, dome, head, hill, horn, knob, knoll, manua, mesa, meseta, mesita, mound, mount, mountain, peak, puu, rock, sugarloaf, table, volcano).
- swamp:** poorly drained wetland, fresh or salt, wooded or grassy; possibly covered with open water (bog, cienaga, marais, marsh, pocosin).
- tower:** a manmade structure, higher than its diameter, generally used for observation, storage, or electronic transmission.
- trail:** a route for passage from one point to another; does not include roads or highways, categories or entities presently not included in this gazetteer (jeep trail, path, ski trail).
- tunnel:** a linear underground passageway open at both ends.
- valley:** a linear depression in the Earth's surface that generally slopes from one end to the other (barranca, canyon, chasm, cove, draw, glen, gorge, gulch, gulf, hollow, ravine).
- well:** a manmade shaft or hole in the Earth's surface used to obtain fluid or gaseous materials.
- woods:** a small area covered with a dense growth of trees; does not include an area of trees under the administration of a political agency; see "forest."
