**THE NATIONAL GAZETTEER OF THE  
UNITED STATES OF AMERICA  
NEW JERSEY 1983**

Barnegat Lighthouse took its name from adjacent Barnegat Inlet which connects Barnegat Bay with the Atlantic Ocean. The name, first appearing on a 1656 map as "Barndegat," reflects the early Dutch heritage of New Jersey. It is derived from "barende gat" meaning "foaming entrance (passage)," a descriptive reference to the break in the barrier islands with its foamy or breaking surf.

## FOREWORD

The U.S. Geological Survey and the U.S. Board on Geographic Names have a long history of cooperation in establishing uniform geographic names usage on Federal maps, charts, and on other publications. The cooperative effort has been a natural blending of technical talent and responsibility that has been mutually beneficial to the missions and programs of both organizations. The Board on Geographic Names is responsible for establishing official names for use throughout the Federal Government. The Geological Survey is responsible for the preparation and maintenance of the base map series of the Nation's lands and waters and publishes reports based on investigations of our mineral, energy, land, and water resources. In addition to being a principal user of the official names determined by the Board, the Geological Survey with its widely scattered field operations has been a major source of information necessary for making the decisions establishing those names.

The basis for the cooperation between the Geological Survey and the Board is recognition that the standard use of geographic names is necessary for geographical communication. The use of geographic names in language gives us a primary reference system that affects all people almost every day of their lives. Geographic names have strong psychological significance because they have close association with thought processes that give man the ability to perceive and understand the world around him. They identify areas of cultural and administrative responsibility, define political boundaries, and carry legal weight in determining property, mineral, and water rights.

"The National Gazetteer of the United States of America" is the result of a long-term effort to provide a standard reference to the Nation's named places, features, and areas. As early as 1892, with the support of the newly organized Board on Geographic Names and as part of its mapping program, the Geological Survey began cataloging geographic names and planned to produce a series of State gazetteers "designed as an aid in finding any geographic feature upon the atlas sheets published by the Geological Survey." Compilation was initially done by Henry Gannett, Chief Geographer, under the direction of John Wesley Powell, second Director of the Survey. Gannett was chairman of the Board on Geographic Names from 1894 until his death in 1914. Gazetteers for 12 States, Puerto Rico, Territory of Alaska, and Indian Territory (Oklahoma) were published between 1894 and 1906. Large-scale topographic mapping, from which the name information for the gazetteers was derived, however, is a slow process and inadequate map coverage led to the discontinuation of the program.

In 1976, the Geological Survey again began the systematic collection of geographic name information at a time when published large-scale topographic maps were available for more than 70 percent of the country. This information comprises a major part of a computerized national geographic names data base. This volume is part of the USGS Professional Paper series, "The National Gazetteer of the United States of America," and is derived from the data base.

#### **ACKNOWLEDGMENTS**

Publication of the National Gazetteer required a considerable amount of extra time and effort by several members of the geographic names staff in the Geological Survey. Special recognition is given to Sam Stulberg and Roger L. Payne, who researched and developed the Geographic Names Information System (GNIS), and Ernest F. Berringer, gazetteer director, who provided necessary leadership for the final production of the gazetteer.

# NATIONAL GAZETTEER OF THE UNITED STATES—NEW JERSEY 1983

## INTRODUCTION

By Donald J. Orth

This gazetteer lists about 10,000 geographic names in alphabetical order for places, features, and areas within or partly within the State of New Jersey. It is part of a series of State, territory, and other special listings of geographic names collectively titled "The National Gazetteer of the United States of America" and published as U.S. Geological Survey Professional Paper 1200. This series is prepared in cooperation with the U.S. Board on Geographic Names. Its purpose is to provide a national standard for reference and research on geographic names and a base for other data systems. Separate volumes of the National Gazetteer are identified by principal geographic area or topic and year. Each volume will be revised periodically with the year of publication as part of the title. The information in the National Gazetteer may be kept up to date between revisions by noting appropriate changes and new entries published in the reports of the U.S. Board on Geographic Names. These reports may be found in libraries or can be ordered directly from the Executive Secretary, Domestic Geographic Names, Board on Geographic Names, 523 National Center, Reston, VA 22092.

## UNITED STATES BOARD ON GEOGRAPHIC NAMES

The United States Board on Geographic Names is a Federal body created in 1890 and established in its present form by Public Law in 1947. The purpose of the Board is to resolve name problems and to eliminate duplication of effort by Federal agencies responsible for the production of maps and other publications that use geographic names. Composed of representatives of Federal agencies, the Board is authorized to establish and maintain uniform geographic name usage throughout the Federal Government. Sharing its responsibilities with the Secretary of the Interior, the Board has developed principles, policies, and procedures governing the use of both domestic and foreign geographic names as well as undersea and extraterrestrial feature names. Although established to serve the Federal Government as a central authority to which all name

problems, name inquiries, and new name proposals can be directed, the Board plays a similar role for the general public.

With respect to names used by Americans for places, features, and areas in the United States and its territories, it is the policy of the Board to recognize present-day local usage or preferences where possible. To implement this policy, there is close cooperation with State geographic boards, State and local governments, and with the general public. Where there is confusing duplication of local names or where a local name is derogatory to a particular person, race, or religion, the Board may disapprove such names and seek alternate local names for the features. In cases where local usage is conflicting or when a name is not used by many people, well-established documented names and names with historical significance are given added consideration. The Board also has a policy of not approving new domestic geographic names that commemorate or may be construed to commemorate living persons.

Any person or organization, public or private, may make inquiries or request the Board on Geographic Names to render formal decisions on proposed new names, proposed name changes, or names that are in conflict. Communications concerning domestic geographic names should be addressed to Executive Secretary, Domestic Geographic Names, Board on Geographic Names, 523 National Center, Reston, VA 22092.

## U.S. GEOLOGICAL SURVEY

The U.S. Geological Survey, established in 1879 as a bureau of the Department of the Interior, is one of the Federal Government's major earth-science and fact finding agencies. The Survey's broad and highly diversified research programs aid in the management of the mineral, energy, land, and water resources of the United States. These programs play a vital role in furthering the Nation's welfare by providing information on the character, magnitude, location, and distribution of minerals and ores, and sources and supplies of water, as well as on natural Earth processes that must be understood to maintain environmental quality.

In support of the Survey's mission, its National Mapping Division provides geographic and cartographic information, maps, technical assistance and conducts related research responsive to national needs. The Divi-

sion provides staff support for the domestic geographic names activities of the Board on Geographic Names, manages the national geographic names data base, provides a geographic names information service, and conducts research in support of national mapping and name standardization programs.

#### NATIONAL GEOGRAPHIC NAMES DATA BASE

This gazetteer is derived from the Geographic Names Data Base, which is part of a computerized Geographic Names Information System developed by the Geological Survey. The data base presently contains information for about 2 million names used throughout the United States and its territories. Information within the system can be retrieved, manipulated, and arranged to meet the special needs of a wide variety of users in government, education, business, and industry, as well as those of private individuals. The system can furnish alphabetical and special listings in the form of computer printouts, magnetic tapes, and microfiche. Information about costs and available services of the Geographic Names Information System (GNIS) may be obtained by writing to the Chief, Branch of Geographic Names, U.S. Geological Survey, 523 National Center, Reston, VA 22092.

#### GUIDE TO THE USE OF THE GAZETTEER

This gazetteer lists geographic names found on various maps, charts, and other published documents. Names of streets and roads are not included. The names are listed as one-line entries in alphabetical order followed by seven categories of information. Each category of information is in a separate column on the gazetteer pages. Categories contain the following information, in order from left to right:

**Name (1st column)**—The proper name of a feature, place, or area is listed in alphabetical order, letter by letter, from beginning to end ignoring spaces and printing marks. Exceptions to this rule occur in those cases where the generic part of the name of a *physical feature* precedes the specific part as in Mount Adams, Lake Ann, Bay Saint Louis, and Lake of the Woods. In such cases the specific or substantive part is listed first, followed by a comma and the remaining part or parts of the names:

Adams, Mount  
Ann, Lake  
Saint Louis, Bay  
Woods, Lake of the

A definite-form name, for example, The Crossing, La Mesa, and The Racetrack, is also listed with the specific part of the name first:

Crossing, The  
Mesa, La  
Racetrack, The

However, a populated place, locality, or civil division (city, village, county, township, crossroad, and railroad siding) named for a physical feature is always listed in normal order even though the generic part of the name may precede the specific part. A village or locality called "Mount Calvary" is listed in that order, while a physical feature with the same name is shown with the specific part of the name first; this is, "Calvary, Mount." A few names listed in the first column in the gazetteer are followed by descriptive words in parentheses. These words or phrases give special information about name usage or about the specific place or feature. This information is generally self-explanatory, for example: (ruins), (historic site), and (abandoned) refer to the present state of the place; (old channel), (submerged), (foot bridge), and (siding) provide further description; and (reduced name use) and (historical) refer to the name and not the place.

The genitive apostrophe is not used within the body of a geographic name.

**Feature class (2d column)**—The terms listed in this category identify the kinds of features or places to which the names apply. The meanings of the terms are very broad so that similar kinds of landscape features can be grouped into general classes. For example, the term "stream" includes all kinds of flowing water which may locally be called a creek, run, river, branch, bayou, or fork. See page XVII for a list of these terms and their definitions.

**Status (3d column)**—Geographic names can be classified according to their use or official status as determined by the U.S. Board on Geographic Names. This category of information gives the status of each name in the gazetteer as determined by the Board. The designators and their meanings shown in this column are as follows:

**BGN (date)**: This designator indicates that the written form of the name and its application, as given in the entry, has been determined by the Board on Geographic Names (BGN) to be official for use throughout the Federal Government. If a year date follows the "BGN" designation, the name and its application were subject to special research and decision by the Board and the decision was published during the year shown. Some names in this category were also made official by some form of administrative action.

**US (date)**: A geographic name and its application listed with this designator were established by an Act of Congress and is official by law. The date is the year the law was passed.

**ADMIN**: The names of certain kinds of geographical entities, such as counties, parks, forests, and townships, logically fall within the administrative

jurisdictions of Federal, State, and local governmental organizations. The authority for establishing these names is based on recognized organic, inherent, or constitutional rights. The names listed with this designator are official for Federal usage.

**UNOFF:** The Board on Geographic Names has not established these names as official. They are included in the gazetteer for reference purposes.

**VARIANT:** In each case, a name with this designator is a written variant of an official name for the same place, feature, or area. A "See" reference to the official name is given on the line below the entry along with information about the location of the named entity.

**County** (4th column)—This is the name of the county in which the listed entity is located. If the place, feature, or area lies in more than one county, the county listed is the one in which the center of the feature is found; or, in the case of a stream or valley, the county listed is the one in which the feature's mouth is located. Figure 1 outlines the counties of New Jersey.

**Geographic coordinates** (5th column)—Latitude and longitude are given for the mouths of streams and valleys; centers of bays, islands, lakes, and populated places; the extremities of points of land; the summits of mountains and hills; and the dams of reservoirs. The first two numbers are *degrees*, followed by two numbers for *minutes*, and the last two for *seconds* N (north) latitude. This sequence is followed by three, two, and two numbers respectively representing degrees, minutes, and seconds W (west) longitude. Example: 421540N0725732W reads 42 degrees, 15 minutes, 40 seconds north latitude and 072 degrees 57 minutes, 32 seconds west longitude.

**Source** (6th column)—The geographic coordinates are given for the source or heads of streams and valleys.

**Elevation** (7th column)—The specific or average elevation is given in feet above the National Geodetic Vertical Datum of 1929 (approximately sea level) for tops of peaks, mountains, ridges, and hills; the surfaces of lakes and reservoirs; the low points of passes and basins; and the approximate centers of populated places.

**Map** (8th column)—New Jersey is subdivided into 175 7½-minute quadrangle areas, each of which is covered by a 1:24,000-scale topographic map published by the Geological Survey. This column indicates the name of the map on which the named place or feature may be located. All names are not shown on the topographic maps. See the "Alphabetical List of Geological Survey Maps of New Jersey" on this page. When ordering topographic maps from the Distribution Branch refer to the map name.

State indexes to topographic maps are available from

#### Eastern Distribution Branch

Maps of areas east of the Mississippi River including Minnesota, Puerto Rico, and the Virgin Islands:

#### NEW JERSEY AND ITS CAPITALS

The political history of the State of New Jersey began on October 11, 1614, when the Dutch formally claimed the area between Virginia and "New France" for commercial purposes and named it *Nieu Nederlandt* (New Netherland). In 1664, King Charles II pronounced English claim to the Dutch colony and granted the lands to his brother the Duke of York (later James II). On June 23–24, 1664, the Duke, in turn, conveyed part of the area to two court favorites, Sir George Carteret and John, Lord Berkeley, thereby creating a "tract of land" hereafter to be called either New Jersey or by the Latin form of the name *Nova Caesaria*. Unaware of the Royal grant to Carteret and Berkeley, Governor Richard Nicolls of New York encouraged settlement in the colony which he unsuccessfully proposed to name *Albania* in honor of one of the Duke of York's titles.

The Dutch colony was seized by the English in August 1664. New Jersey was divided into east and west parts and remained an English colony until June 1776 when the people declared their independence. Figure 2 shows the division of the colony prior to June 1776. On December 18, 1787, it became the third State of the Thirteen Original States to ratify the Constitution.

The colony was named for the largest of the Channel Islands off the coast of France. In 1650 the Duke of York was given refuge on Jersey by Sir George Carteret, who was then Lieutenant Governor of the island, and who defended his native island from 1643 to 1651 in behalf of King Charles II during the Puritan Revolution and Civil War.

The present capital of New Jersey is *Trenton*. Founded in 1679 at "ye ffales of ye De La Warr," the place was originally called *The Falls*. It was named *Trents Town* in 1714 by a Philadelphia merchant and developer, William Trent, and later shortened to its present spelling. Trenton became the State capital in 1790.

The first seat of government of East New Jersey was named *Elizabethtown* in honor of Lady Elizabeth, wife of Phillip Carteret, first English governor in 1665 and cousin of Sir George Carteret. The government was moved to *Perth Amboy* in 1686, a name of both native American and European origins. Adopting an Algonquian Indian name, early settlers called the peninsula or area at the mouth of the Raritan River *Ambo* or *Ambo Point*. Although thought to mean "bowl-like" or "large level area," the original Indian name and its meaning is uncertain. In 1683 it was decided to "build a convenient town, for merchandise, trade, and fishery on Ambo Point" called *Perth* or *New Perth* in honor of one of the proprietors, James, Earl of Perth. The Indian name for the area persisted with the settlement name and in 1698 the names were combined as "Perth Amboy" in official instructions to the deputy governor.

*Burlington*, the colonial capital of West New Jersey, was settled by Quakers in 1677. It is thought that the settlement was first called *New Beverly* and then *Bridlington* for places in Yorkshire, England, from which some of the first settlers came, and that the present name is an early adaption to the pronunciation of *Bridlington*. The original draft of the town as laid out in 1678, however, uses the present name and spelling.

FIGURE 2.—The New Jersey part of Governor Pownall's map published in Thomas Jeffrey's American Atlas in 1776, showing early county boundaries and the line separating East and West New Jersey.

## GLOSSARY

By Sam Stulberg and Roger L. Payne

The following is a glossary of common language terms used to categorize each place, feature, or area identified by a geographic name. The terms assigned to each entry form the second column of information on the gazetteer page. The terms and their definitions as used herein should be considered only a general guide and not a dictionary of balanced, exclusive, or precise terminology for the identification of cultural and natural features. Commonly used generic names are listed at the end of each definition to assist in understanding the range of meaning represented by the feature term. A geographic name in plural form is identified by a term in singular form; a name like "Relic Islands" is identified as "island." The term "populated place" is abbreviated "ppl."

- airport** a manmade facility maintained for the use of aircraft (airfield, airstrip, landing field, landing strip).
- arch** a natural archlike opening in a rock mass (bridge, natural bridge, sea arch).
- area** any one of several areally extensive natural features not included in other categories (fan, badlands, barren, delta, garden).
- arroyo** a watercourse or channel through which water may occasionally flow (wash, gully, coulee, draw).
- bar** a natural accumulation of sand, gravel, or alluvium, or ledge of rock or coral forming an underwater or exposed embankment (sandbar, spit, reef, ledge, shoal).
- basin** a natural depression or relatively low area enclosed by higher land (sink, pit, amphitheater, cirque).
- bay** an indentation of a coast or shoreline enclosing a part of a body of water; a body of water partly surrounded by land (arm, bight, cove, estuary, gulf, inlet, sound).
- beach** the sloping shore along a body of water that is periodically washed by waves or tides and is usually covered by sand or gravel (shore, strand, coast).
- bench** an area of relatively level land on the side of an elevation such as a hill, ridge, or mountain where the slope of the land rises on one side and descends on the opposite side (level).
- bend** a curve in the course of a stream and (or) the land within the curve; a curve in a linear body of water (loop, meander).
- building** a manmade structure with walls and a roof for protection of people and (or) materials; church-

es, hospitals, and schools are special types of buildings and are assigned individual categories.

- bridge** a manmade structure carrying a trail, road, or other transportation system across a body of water or depression (overpass, trestle, causeway).
- canal** a manmade waterway used by watercraft or for drainage, irrigation, mining, or waterpower (ditch, lateral).
- cape** a projection of land extending into a body of water (lae, point, peninsula, neck).
- cave** a natural underground passageway or chamber, or a hollowed out cavity in the side of a cliff (cavern, grotto).
- cemetery** a place or area for burying the dead (burial, grave, burying ground, memorial garden).
- channel** a linear deep part of a body of water through which the main volume of water flows and is frequently used as a route for watercraft (passage, thoroughfare, thoroughfare, strait, reach).
- church** a building used for religious worship (chapel, synagogue, mosque, tabernacle, temple).
- civil** a political division formed for administrative purposes (county, borough, town, township).
- cliff** a very steep or vertical slope (bluff, crag, precipice, head, headland, nose, overhang, pali, palisade, promontory, rim, rimrock).
- crater** a circular depression at the summit of a volcanic cone or one on the surface of the land caused by either volcanism, meteoritic impact, or underground subsidence; a manmade depression caused by an explosion (caldera, lua).
- dam** a water barrier or embankment built across the course of a stream or into or within a body of water to control and (or) impound the flow of water (breakwater, dike, jetty).
- falls** a perpendicular or very steep descent of water in the course of a stream (waterfall, cataract, cascade).
- flat** a relatively level area within a region of greater relief (playa, clearing, glade).
- forest** a bounded area of woods, forest, or grassland under the administration of a political agency (national forest, national grasslands, State forest); see "woods."
- gap** a low point or opening between hills or mountains or in a ridge or mountain range (pass, notch, water gap, wind gap, saddle, col).
- geyser** an eruptive spring from which hot water, steam, and (or) mud, are periodically thrown.

- glacier** a body or stream of ice moving outward and downslope from an area of accumulation; an area of relatively permanent snow/ice on the top of or side of a mountain (ice patch, snow patch, icefield).
- gut** a relatively small coastal waterway connecting larger bodies of water or other waterways (slough, creek, inlet).
- harbor** a sheltered area of water where ships or other watercraft can anchor or dock (port, road, roadstead, hono).
- hospital** a building where the sick or injured may receive medical or surgical attention (infirmary).
- island** an area of dry or relatively dry land surrounded by water or low wetland (isle, isla, rock, archipelago, atoll, key, cay, hammock, hummock, moku).
- isthmus** a narrow projection of land in a body of water connecting two larger land areas.
- lake** a natural body of inland water (pond, backwater, lagoon, laguna, pool, resaca, lac, waterhole).
- lava** a formation or feature resulting from the consolidation of molten rock on the surface of the Earth (lava flow, kipuka).
- levee** a natural or manmade embankment flanking a stream (bank, berm).
- locale** a place at which there is or was relatively minor human occupation or activity; does not include populated places (ppl), mines, and dams (railroad siding, station, junction, site, camp, landing, battlefield, crossroad, ranch, farm, windmill, tower, ruins, ghost town).
- mine** a place or area from which commercial minerals are or were removed from the Earth; does not include oilfield (shaft, quarry, pit).
- oilfield** an area where petroleum is or was removed from the Earth.
- other** miscellaneous named manmade entities that cannot readily be placed in the other feature classes listed here.
- park** a place or area set aside for recreation or preservation of a cultural or natural resource and under some form of governmental administration; does not include a forest (national park, State park, national historical landmark, wilderness).
- pillar** a vertical-standing, often spire-shaped, natural rock formation (pohaku, pinnacle, chimney, monument, rock tower).
- plain** a region of general uniform slope, comparatively level and of considerable extent (grassland, highland, kula, upland, plateau).
- ppl** populated place: a place or area with clustered or scattered buildings and a permanent human population (city, village, settlement, town).
- range** a chain of hills or mountains; a somewhat linear mountainous or hilly area (cordillera, sierra).
- rapids** fast-flowing section of a stream, often shallower than other sections and with exposed rocks or boulders (ripple, riffle).
- reservoir** an artificially impounded body of water (tank, lake).
- ridge** an elevation with a narrow, linear crest; may be part of a hill or mountain (rim, crest, cuesta, escarpment, hogback, lae, spur).
- school** a building or group of buildings used as an institution for study, teaching, and learning (academy, high school, college, university).
- sea** a large body of saltwater (gulf, ocean).
- slope** a gently inclined part of the Earth's surface (pitch, grade).
- spring** a place where underground water flows naturally to the surface of the Earth (seep).
- stream** a linear body of water flowing on the Earth's surface (awawa, creek, river, anabranch, distributary, branch, run, slough, bayou, pup, brook, fork, kill, rio).
- summit** a prominent elevation rising about the surrounding level of the Earth's surface; does not include ridges and ranges (ahu, hill, mountain, knob, butte, berg, colina, cone, volcano, cumbre, dome, head, knoll, mauna, mesa, meseta, mesita, mound, mount, peak, puu, rock sugar loaf, table, bald, cerro, horn).
- swamp** poorly drained wetland, fresh or salt, wooded or grassy; possibly covered with open water (marsh, bog, cienaga, marais, pocosin).
- trail** a route for passage from one point to another; does not include roads or highways, categories of entities presently not included in this gazetteer (ski trail, jeep trail, path).
- tunnel** a linear underground passageway open at both ends.
- valley** a linear depression in the Earth's surface that generally slopes from one end to the other (canyon, barranca, chasm, cove, draw, glen, gorge, gulch, gulf, hollow, ravine).
- well** a manmade shaft or hole in the Earth's surface used to obtain fluid or gaseous materials.
- woods** a small area covered with a dense growth of trees; does not include an area of trees under the administration of a political agency; see "forest."
