

EXPLANATION

These graphs show the number of blow counts (blows per foot) versus depth (in feet) with values corrected to an overburden effective stress of 1 t/ft². Median values and first and third quartile values of data are shown for blow counts and topstratum thicknesses for Regions outlined on plate 3. Insufficient blow count data are available to determine meaningful quartiles for Region 7. Numbers above the third quartile blow counts are the total number of blow count data points.

STANDARD PENETRATION TEST BLOW COUNTS CORRECTED TO AN
OVERBURDEN EFFECTIVE STRESS OF 1 T/FT²; TOPSTRATUM
THICKNESSES FOR DIFFERENT REGIONS
