The High Plains Area Land Use/Resource Atlas Project supported by the United States Department of the Interior, Bureau of Land Management, and the National Aeronautics and Space Administration. The project was coordinated with the U.S. Geological Survey's Geographic Resource Data Committee, 1979. The project was supported by a grant from the National Aeronautics and Space Administration, Office of Biological and Environmental Research, and the National Geospatial-Intelligence Agency.

Introduction
The project is intended to provide a comprehensive view of the irrigation practices and land use patterns of the High Plains region of the United States. The region includes parts of Colorado, Kansas, Oklahoma, and Texas, and is characterized by a semiarid climate and a variety of land use practices, including cropland, pasture, and rangeland.
