

Figure 1. Map showing locations of tectonic terranes and major faults in and near Glacier Bay National Park and Preserve. Dark gray areas indicate plutons that are labeled individually in figure 3. Blue dotted lines show the locations of the Grand Pacific Glacier (north) and the Brady Glacier (south) systems. Thin black dot-dashed line denotes the boundary of Glacier Bay National Park and Preserve. Terranes are outlined with a red dashed line and labeled in red. Contacts are dashed where inferred (underwater). JHI, Johns Hopkins Inlet.
