Heterogeneous orthogneiss complex (Early Cretaceous)
Foliated porphyritic biotite granodiorite (Late Cretaceous)
Contact
Metamorphic rocks, undivided (Neoproterozoic? and Mesoproterozoic?)
Biotite phyllite, gneiss, and migmatite (Mesoproterozoic)
Granitic augen gneiss (Mesoproterozoic)
Syenite and diorite (Ordovician to Cambrian)
Riggins Group (Jurassic to Permian)
Metamorphosed rocks of Blue Mountains island arc, undifferentiated
Huntington Formation (Upper and Middle Triassic)
Hornblende gabbro (Late Triassic)
Quartz diorite and tonalite (Early Cretaceous? and Late Jurassic)
Challis Volcanic Group, undivided (Eocene)
Basalt of Cuddy Mountain (Miocene)

—Dashed where approximately located; queried where uncertain.
—Showing plunge where known. Dotted where concealed.
—Showing dip where known
—Boundary diffuse

INDEX TO PAYETTE NATIONAL FOREST

U.S. DEPARTMENT OF THE INTERIOR

PROFESSIONAL PAPER 1666

GEOLOGIC MAP OF THE WESTERN PART OF THE PAYETTE NATIONAL FOREST,
WEST-CENTRAL IDAHO

Karen Lund

Karen Lund, USGS, and Jon Oblad, Eastern

See "Index to sources of geologic mapping" (fig. A2).

Projection: Universal Transverse Mercator, zone 11.
