

Figure 11. Species richness for the taxa included in this volume for taxa whose distributions are unchanged from previous volumes (left map, orange on scatterplots), taxa with revised distributions (middle map, red on scatterplots), and new taxa (right map, blue on scatterplots). On the scatterplots the remapped species are plotted in the top layer, the new taxa in the middle layer, and, in the bottom layer, species whose geographic distributions are unchanged. °C, degrees Celsius; mm, millimeters; AE/PE, mean actual evaporation divided by potential evaporation.
