Flood-Inundation Map for Fort Wayne, Indiana

Corresponding to a Stage of 22.00 Feet and an Elevation of 770.46 Feet (NAVD88)
at the U.S. Geological Survey Streamgage Number 04182000 on the St. Marys River

By
Chad D. Menko, Moon H. Kim, and Kathleen K. Fowler

2012

Chad D. Menke, Moon H. Kim, and Kathleen K. Fowler

These forecast models (1) estimate the amount of runoff generated by precipitation and snowmelt, (2) simulate the amount and timing of water flowing through selected stream reaches in the United States, and (3) forecast water-surface elevations along a selected stretch of river (AHPS forecast point) throughout the forecast period (every 6 hours and 3 to 5 days out in many locations). For more information on AHPS forecasts, please see:

Any use of trade, product, or firm names is for descriptive purposes only and does not imply endorsement by the U.S. Government.

The accuracy of the flood-inundation maps will vary with the accuracy of the digital elevation information from which they were derived. These maps are preliminary and should be used as an aid in emergency planning but assume no legal liability or responsibility resulting from the use of this information.

The accuracy and limitations of these maps should be considered when using them to make decisions. All data should be verified by independent sources when used for decision-making.
