Prepared in cooperation with the Indiana Department of Transportation

Scientific Investigations Map 3246 Sheet 9 of 9

Pamphlet accompanies map

DISCLAIMER FOR FLOOD-INUNDATION MAPS

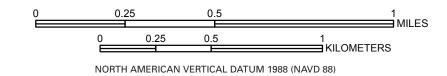

Projection: Transverse Mercator

Program 2010, available at http://gis.iu.edu/

Inundated areas shown should not be used for navigation, regulatory, permitting, or other legal purposes. The USGS provides these maps "as-is" for a quick reference, emergency planning tool but assumes no legal liability or responsibility resulting from the use of this information.

JNCERTAINTIES AND LIMITATIONS REGARDING USE OF FLOOD-INUNDATION MA

Although the flood-inundation maps represent the boundaries of inundated areas with a distinct line, some uncertainty is associated with these maps. The flood boundaries shown were estimated by steady-state hydraulic modeling, assuming unobstructed flow, and using streamflows at selected USGS streamgages. The hydraulic structures existing as of December 2011. Unique meteorological factors (timing and distribution of precipitation) may cause actual streamflows along the modeled reach to vary from those assumed during a flood, which may lead to deviations in the water-surface elevations and initiations pertinent to this study are described in the document accompanying this set of flood inundation maps will be used in conjunction with National Weather Service (NWS) river forecasts, the user should be aware of additional uncertainties that may be inherent or factored into NWS forecast procedures. The NWS uses forecasts models (1) estimate the amount of runoff generated by precipitation and shows at the flood inundation on AHPS forecasts, please see http://water.weather.gov/ahps/pcpn\_and\_river\_forecasting.pdf.

Flood-Inundation Map for Rensselaer, Indiana, Corresponding to a Stage of 19.00 Feet and an Elevation of 661.00 Feet (NAVD 88) at U.S. Geological Survey Streamgage Number 05522500 on the Iroquois River
