

Map projected to the North American Datum of 1927 (NAD27).
Projection Universal Transverse Mercator, Zone 13.
The Missionary Ridge fire perimeter was generated by the USDA Forest Service, compiled on July 4, 2002.
Flood Insurance Rate Maps provided by Federal Emergency Management Agency.
Drainage basin and debris-flow boundaries generated by the U.S. Geological Survey.
Source data provided by **The National Map**, National Elevation Data and National Hydrography Data - 2002, Geographic Names - 2003, and Geographic Data Technology Inc., Roads - 2001.

POST-WILDFIRE HAZARD MITIGATION MAP

THIS MAP IS TO BE USED FOR ADVISORY PURPOSES ONLY.

The Post-Wildfire Hazard Mitigation Map has been developed on the basis of hydrologic, engineering, and surveying studies within and adjacent to the hazard area. This map is provisional and is to be considered temporary in nature; it reflects short-term (1 to about 3 years) conditions of the post-fire watershed or study area. Flood-plan delineations are based on computed water-surface elevations at surveyed cross sections; flood-plan boundaries between cross sections are interpolated on the basis of topographic contours and are approximate. This map is not intended to affect in any way those maps used by the Federal Emergency Management Agency (for example: Flood Insurance Rate Maps) or United States Geological Survey (USGS) maps for purposes of flood insurance or other programs. For further information or clarification, please contact Federal Emergency Management Agency at (303) 235-4909, the USGS at (303) 202-4008, or the Colorado Water Conservation Board at (303) 866-3441.

EXPLANATION

Flood Insurance Rate Map index	Potential debris flow not analyzed
Missionary Ridge fire perimeter	Potential debris flow analyzed
Precipitation gages	
Coon Creek 18 - Tributary basin name and number as presented in table 6
