

POST-WILDFIRE HAZARD MITIGATION MAP
THIS MAP IS TO BE USED FOR ADVISORY PURPOSES ONLY.
The Post-Wildfire Hazard Mitigation Map has been developed on the basis of hydrologic, engineering, and surveying studies within and adjacent to the hazard area. This map is provisional and is to be considered temporary in nature; it reflects short-term (1 to about 3 years) conditions of the post-fire watershed or study area. Floodplain delineations are based on computed water-surface elevations at surveyed cross sections; flood-plain boundaries between cross sections are interpolated on the basis of topographic contours and are approximate. This map is not intended to affect in any way those maps used by the Federal Emergency Management Agency (for example, Flood Insurance Rate Maps) or United States Geological Survey (USGS) maps for purposes of flood insurance or other programs. For further information or clarification, please contact the Federal Emergency Management Agency at (303) 235-4909, the USGS at (303) 202-4008, or the Colorado Water Conservation Board at (303) 866-3441.

Map projected to the North American Datum of 1927 (NAD27).
Projection Universal Transverse Mercator, Zone 13.

The Hayman Fire perimeter was generated by the USDA Forest Service, compiled on June 27, 2002.

Flood Insurance Rate Maps provided by Federal Emergency Management Agency.

Drainage-basin boundaries generated by the U.S. Geological Survey.

Source data provided by *The National Map*, National Elevation Data and National Hydrography Data - 2002, Geographic Names - 2003, and Geographic Data Technology Roads - 2001.

Map produced at the USGS Rocky Mountain Mapping Center in cooperation with the Federal Emergency Management Agency for the Post-Wildfire Hazards Interagency Group.

EXPLANATION	
	Flood Insurance Rate Map index
	Hayman fire perimeter
	Drainage-basin boundary
14R	Drainage-basin model basin identification number as presented in Appendix 3
