Application of FTLOADDS to Simulate Flow, Salinity, and Surface-Water Stage in the Southern Everglades, Florida

By John D. Wang, Eric D. Swain, Melinda A. Wolfert, Christian D. Langevin, Dawn E. James, and Pamela A. Telis

Prepared in cooperation with the South Florida Water Management District as part of the Comprehensive Everglades Restoration Plan

U.S. Department of the Interior
U.S. Geological Survey
U.S. Department of the Interior
DIRK KEMPTHORNE, Secretary

### Figures

1. Map showing location of the TIME and SICS domains, geographic features, and water-management features ................................................................. 3
2. Flowchart showing linkage between models used to simulate various restoration scenarios ................................................................. 8
3-7. Maps showing:
   3. Extent of active cells and land-surface altitudes in the TIME area .......... 10
   4. Distribution of Manning’s $n$ values in the TIME area .......................... 12
   5. Adjustments to Manning’s $n$ values in the TIME area ........................ 13
   6. Hydraulic conductivities in layer 1 in the TIME area .......................... 14
   7. Transmissivity in layer 5 in the TIME area ....................................... 15
8. Graph showing cumulative flows at selected control structures in the TIME area ................................................................. 15
9-11. Maps showing:
   9. Location of stage recording stations in the TIME area ....................... 16
   10. Distribution of annual average rainfall in the TIME area .................... 18
   11. Location of rainfall stations within the rainfall zones of the TIME area 19
12. Graphs showing comparison between cumulative rainfall for the six zones and average rainfall computed by the dynamic Thiessen polygon method ................. 20
13. Graph showing cumulative evapotranspiration in the TIME area .......... 22
14. Diagram of freshwater flux cases ....................................................... 24
15. Graphs showing comparison of water levels at selected gaging stations in the TIME area ................................................................. 25
16. Map showing spatial distribution of model mean stage bias in the TIME area for run 142 ................................................................. 29
17. Map showing spatial distribution of percentage of explained variance in the TIME area for run 142 ................................................................. 30
18. Time-series plots showing measured and computed stage at selected west coast rivers over time ................................................................. 31
19. Time-series plots showing river flow over neap-spring cycle at selected west coast rivers ................................................................. 33
20. Graphs showing cumulative flows at selected west coast rivers over time 34
Appendix Figures

A1. Map showing boundary conditions for the SICS domain .................................................92
A2. Map showing overlay of the SFVMM grid on the SICS model grid .................................93
A3-A5. Graphs showing:
   A3. Flow from the calibrated and verification linked model runs at selected coastal creeks along northeastern Florida Bay, 1996-2000, using FTLOADDS ................................................................. 94
   A4. Cumulative flow from the calibrated and verification linked model runs at five coastal creeks along northeastern Florida Bay, 1996-2000, using FTLOADDS ................................................................. 96
A5. Salinity from the calibrated and verification linked model runs at selected coastal creeks along northeastern Florida Bay, 1996-2000, using FTLOADDS................................................................. 97

A6. Map showing location of surface-water stations used for determination of water-level and discharge data in the SICS domain .................................................. 98

A7. Graphs showing surface-water stage from the calibrated and verification linked model runs at selected wetland stations in Everglades National Park, 1996-2000, using FTLOADDS ............................................................................. 100

A8-A13. Plots showing:

A12. Effects of sea-level rise on salinities at selected coastal creeks along northeastern Florida Bay, 1996-2000 ................................................................. 110

Tables

1. Evapotranspiration monitoring site characteristics ...................................................... 7

2. Net average total flow and freshwater flow toward the coast for the standard data period ........................................................................................................... 15

3. Calculated evapotranspiration values as a function of aerodynamic roughness at vegetated sites in southern Florida ................................................................. 21

4. Calculated evapotranspiration values as a function of aerodynamic roughness and water heat-storage .................................................................................. 21

5. Summary statistics of stage comparisons for station data used in the TIME application .................................................................................................................. 28

6. West coast river stage comparison statistics for run 142 ............................................. 32

7. Comparison statistics for measured and simulated west coast river flows ............... 34

8. Comparison of SICS and ESICS applications ................................................................ 48

9. Water-level comparison statistics for run 139, local Manning's n adjustments ......... 54

10. Water-level comparison statistics for run 142, base case simulation ......................... 57

11. Water-level comparison statistics for run 145, leakage neglected ......................... 62

12. Water-level comparison statistics for run 143, Main Park Road as a barrier ........... 66

13. Water-level comparison statistics for run 146, land-surface altitude lowered 0.1 meter ................................................................................................................. 70

14. Water-level comparison statistics for run 157, final calibration ............................... 78

15. Water-level comparison statistics for run 157GW, model ground water only ....... 81
