

[the nonparametric Mann-Kendall test with a 5-percent level of significance was used to determine statistically significant trends; n, number of years of record; blue bold **x** indicates annual peak discharge available and statistically significant upward trend detected for period of record; red italic *x* indicates annual peak discharge available and statistically significant downward trend detected for period of record; station numbers and years of record also colored (blue for upward trend and red for downward trend) for records with statistically significant trends]
