

**U.S. Geological Survey (USGS)
Water-Quality Monitoring Station
Temple Basin, Lake Mead, Arizona and Nevada**

Water Years 2005 – 09

**Averaged Temperature,
Dissolved Oxygen, and
Specific Conductance**

**By
Depth-Dependent Profiles**

Explanation of Graphs:

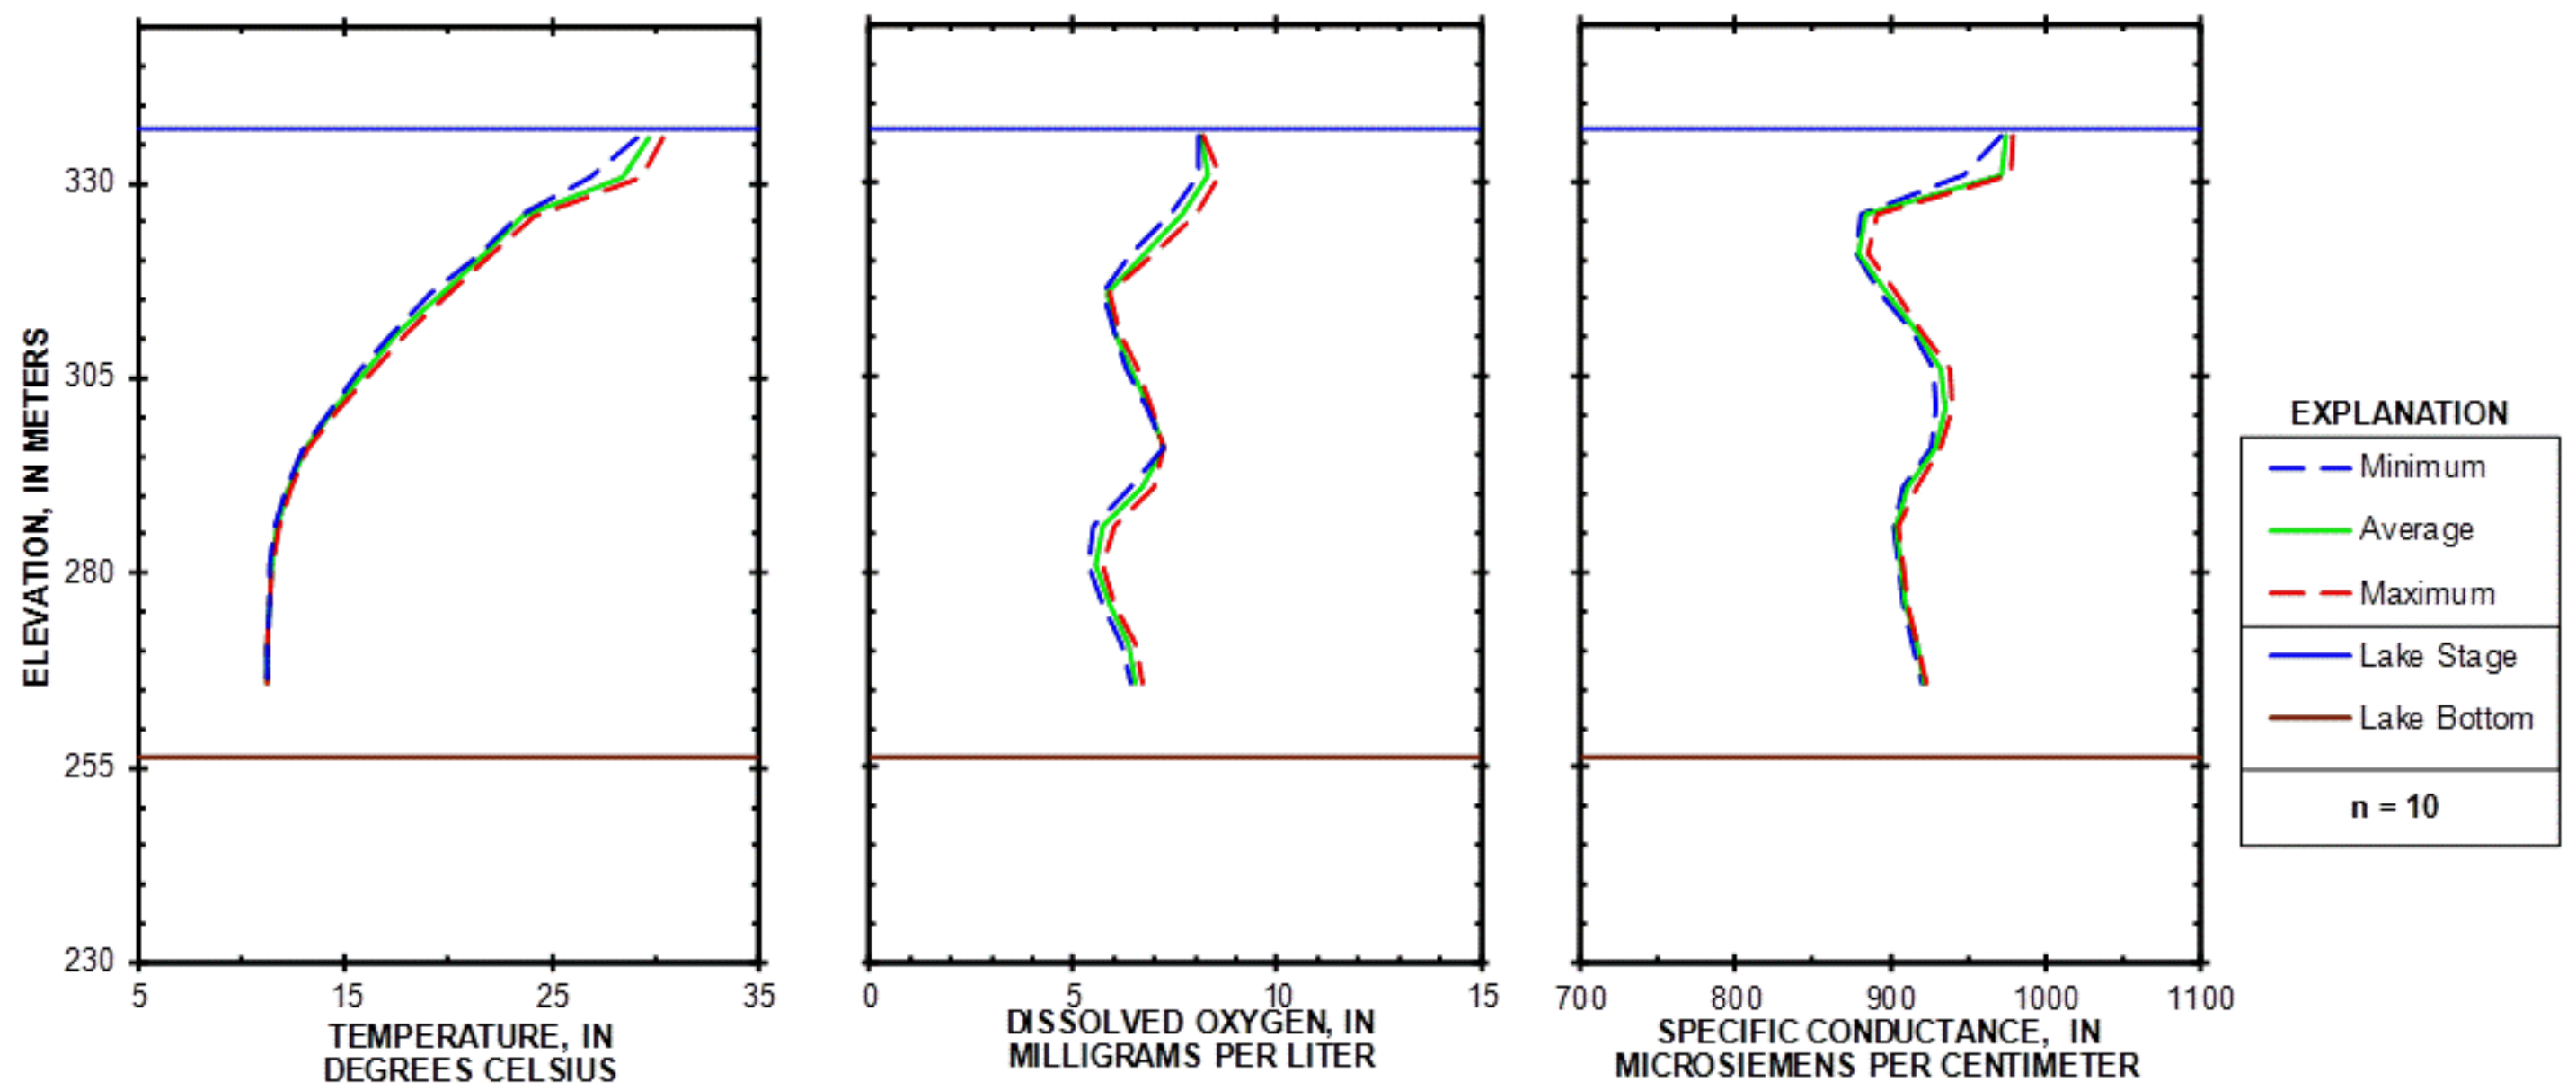

The upper three plots presented in the following graphs show averaged temperature, dissolved oxygen, and specific conductance profile data as a function of depth. Depth below lake stage has been normalized to elevation¹ (in meters) because of the fluctuating elevation of the lake stage over the period of interest. The profiles plotted are averages, as well as the maximum and minimum values, recorded for each parameter at each depth during the period for each graph. The number (n) of individual depth-dependent profiles used to compute the average is displayed within the explanation for the plots. Also displayed on these plots are the average monthly elevations of the lake stage and the elevation of the lake bottom² at the Temple Basin monitoring station.

The bottom plot shows the elevation of the lake stage (in meters) as a function of time for individual water years. In addition, this plot shows a shaded section that indicates the period of time that is used for the average, maximum, and minimum values presented in the upper three plots.

¹Vertical coordinate information is referenced to the U.S. Geological Survey datum, adjustment of 1912, locally known as “Power House Datum.”
