

## Appendix E

This appendix contains plots of maximum and minimum seasonal 7- and 30-day average streamflows at 12 locations and water levels at five reservoirs computed from 20-years of simulation results, with the N-day results plotted at the center of the simulation period. Seasons are defined by the monthly periods--March to May, June to October, and November to February. Separate lines are plotted for the maximum, minimum, and median results for the ensemble of level-1 simulations<sup>1</sup> based on the A2 and A1b emission scenarios (described below). Median level-2 simulation<sup>2</sup> results for 11-year periods centered on 2035, 2055, and 2075 are plotted as triangles. A dashed line is also drawn representing the seasonal N-day statistic determined from simulation results for a historical reference period extending from 1991 to 2010.

The following tables list the identifiers or designations shown on the plots that are associated with the emission scenarios and sites.

Special Report on Emissions Scenario Designation	Description
A2	The A2 scenario represents a divided world that is characterized by: <ul style="list-style-type: none"> <li>• A world of independently operating, self-reliant nations.</li> <li>• Continuously increasing population.</li> <li>• Regionally oriented economic development.</li> </ul>
A1b	The A1b scenario represents a more integrated world that is characterized by: <ul style="list-style-type: none"> <li>• Rapid economic growth.</li> <li>• A global population that reaches almost 9 billion in 2050 and then gradually declines.</li> <li>• The quick spread of new and efficient technologies.</li> <li>• A convergent world - income and way of life converge between regions. Extensive social and cultural interactions worldwide.</li> <li>• A balanced emphasis on all energy sources.</li> </ul>

Site ID	Description	Latitude	Longitude
AFRI	Alum Creek at Africa, OH	40° 10' 56"	82° 57' 41"

OSHY	O'Shaughnessy Reservoir, OH	40° 09' 14"	83° 07' 32"
PROS	Scioto River near Prospect, OH	40° 25' 10"	83° 11' 50"
SROR	Scioto River at confluence with Olentangy River	39° 57' 54"	83° 01' 01"

<sup>1</sup> Level 1 simulations account only for anticipated 21st-century changes in climate and operations of three City of Columbus upground reservoirs located in northwest Delaware County, Ohio.

<sup>2</sup> Level 2 simulations account for development-driven changes in land cover and water use in addition to 21st-century changes in climate and reservoir operations.
