EXPLANATION

Flood-inundation area

Limits of study area

Flow arrow—Indicates direction of water flow

USGS streamgage and number

State Route

County Route

UNCERTAINTIES AND LIMITATIONS FOR USE OF FLOOD-INUNDATION MAPS

Although the flood inundation maps represent the boundaries of inundated areas with a distinct line, some uncertainty is associated with these maps. The flood boundaries shown were calculated based on water-surface elevation changes at selected USGS streamgages. Water-surface elevations along the stream reaches were estimated by steady-state hydraulic models using hydrologic and meteorologic data at locations near the USGS streamgages.

Additional data may be needed due to changing conditions such as changes in the channel geometry or roughness, backwater along the main stem river, or backwater from localized debris or ice jams. The accuracy of the floodwater extent portrayed on these maps will vary with the accuracy of the hydraulic model and assumptions used. For more information on AHPS forecasts, please see: http://water.weather.gov/ahps/pcpn_and_river_forecasting.pdf.

DISCLAIMER

Inundated areas shown should not be used for navigation, regulatory, permitting, or other legal purposes. The USGS or its officers or employees, its contractors, contributors, or agents are not responsible for any errors or omissions in this data or for mistaken interpretations by the user. The USGS assumes no legal liability or responsibility resulting from the use of this information.
