GEOLOGIC MAP INDEXES

Geologic Map Indexes are computer-generated State maps on planimetric bases; they show the localities and scales of geologic maps published by the U.S. Geological Survey, other Federal agencies, State geoscience agencies, universities, professional societies, and commercial organizations. They include USGS Open-File Reports, but not theses, dissertations, or open-file material from other organizations. The map areas shown on the indexes are numerically keyed to references listed in the accompanying bibliography. These indexes are available free upon request.

STATE WATER RESOURCES INVESTIGATIONS FOLDERS

A series of folders entitled "Water Resources Investigations in (State)" that outline the Geological Survey's water-resources program in the 50 States and Puerto Rico. Each folder has a large map that shows the location of stream-gaging stations, observation wells, quality-of-water sampling sites, and investigations in progress. Smaller maps show other significant hydrologic aspects. A brief text explains the Water Resources Division's cooperative program and the hydrologic-data network. Also given are the investigations in progress and a selected list of references.

LAND USE AND LAND COVER MAPS

Compiled using USGS Level I and II classification system depicting land cover and man's activities. Associated maps include political units, hydrologic units, census county subdivisions, and Federal land ownership. Scale 1:250,000 or 1:100,000.

The U.S. Geological Survey is now publishing its land use and land cover maps in a new two-color series. L-series maps have land use and land cover information printed in black over planimetric base map information such as transportation features, streams and lakes, locational grids, and place names in another color.

These maps have been available previously through the Survey's open-file procedure. Along with their associated maps (political units, census county subdivision, hydrologic units, and Federal land ownership), reproducible copies of the land use and land cover maps will continue to be available in black-line format, on a variety of materials, from the open file.
